

WARREN COUNTY HEALTH ASSESSMENT & IMPROVEMENT PLAN 2025-2030

Abstract

A six-year plan that prioritizes and provides a framework to address the greatest health concerns in Warren County.

The 2025-2030 Warren County Community Health Assessment and Improvement Plan Committee

Lead Planning Organization

Warren County Public Health..... Dan Durkee, Program Administrator
Olivia Cohen, Senior Health Educator

Community Partners

Adirondack Health Institute..... Sara Deukmejian MBA, MS,
Laura Morris, MHL, MS, CPHQ
ASCEND Mental Wellness..... Andrea Deepe, CEO
Warren County Board of Supervisors..... Ben Driscoll
Hudson Headwaters Health Network..... Cathleen Traver, MPH, V.P. Planning & Grants
Family Services Association..... Kim Sopczyk, Executive Director
Glens Falls Hospital..... Shannon Gaczol, Manager
Open Door Mission..... Jamie Munyon, Executive Director
Southern Adirondack Childcare Association..... Colleen Maziejka, Executive Director
Southern Adirondack Independent Living Center..... Cam Cardinale, Dir. of Comm. Relations
WAIT House..... Jason McLaughlin, Executive Director
Warren County Office for the Aging..... Dee Park, Director
Warren County Office of Community Services..... Tom Barber, Program Analyst
Warren County Planning Department..... Ethan Gaddy, AICP, County Planner
Warren County Department of Social services..... Christina Mastrianni, Commissioner
Warren County Department of Workforce Development..... Liza Ochsendorf, Director

Technical Assistance:

New York State Department of Health, Office of Public Health Practice

Executive Summary

The purpose of the Warren County Community Health Assessment & Improvement Plan is to provide a framework to guide population health improvement strategies for the next six years. Prevention is the focus of the plan. The plan is flexible meaning that opportunities to adapt or completely change health improvement strategies exist should priorities shift due to changes in funding, resource availability, state/federal guidance and other factors outside of local public health control.

The selection of health priority areas allowed for the establishment of goals and objectives that guided selection of evidence-based intervention strategies. Those strategies will be implemented to meet the goals and objectives. Priority selection was informed by an in-depth review of hundreds of data points by local stakeholders and the stakeholder’s own knowledge and expertise. Four priority areas were chosen from a list of 24 pre-determined priorities set by the New York State Health Assessment.

Priority Areas

Domain 1: Economic Stability	Priority Area: Housing Stability and Affordability	Disparities Addressed: Socio-Economic
Domain 2: Social & Community Context	Priority Area: Anxiety & Stress	Disparities Addressed: Socio-Economic
Domain 2: Social & Community Context	Priority Area: Primary Prevention, Substance Misuse, and Overdose Prevention	Disparities Addressed: Socio-Economic
Domain 4: Healthcare Access & Quality	Priority Area: Childhood Behavior	Disparities Addressed: Socio-Economic

Data Review and Sources

Support for the selected health priority areas came from dozens of data sources that were referenced throughout the CHA/CHIP planning process.

Demographic Data: most demographic data was gathered from the American Community Survey (ACS) from the US Census Bureau. Due to the federal government shutdown some demographic information came from Census Reporter which is a free, open-source project that utilizes information from the ACS.

Healthcare System Data: multiple data sources were used to compile this information including the New York State Licensed Professions, NYS Education Department, Office of the Professions, the NYS Department of Health, Health Profiles and the ACS.

General Health Data: was gathered utilizing multiple large-scale data systems maintained by the NYS Department of Health including County Health Indicator Reports, NYS Prevention Agenda Dashboard, among many others.

Local Feedback Data: was gathered using stakeholder and community feedback surveys administered by Warren County Public Health staff and the Adirondack Rural Health Network.

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

Additional Data: other data sources that were used to support the adoption of priority areas include the County Health Rankings & Roadmaps (University of Wisconsin), United State Department of Agriculture (USDA), NYS Department of Criminal Justice Services, along with several others.

Partners & Roles

The development of the Warren County Community Health Assessment and Improvement Plan brought together a diverse group of people and organizations each with their own unique perspectives about our community. The group consisted of community-based organizations representing mental health, homelessness, families, childcare advocates, and disability services.

Numerous County government agencies participated in the process including Department of Social Services, Warren County Workforce Development, Warren County Planning, Office of Community Services (County mental health), and Office for the Aging.

Healthcare partners included the Glens Falls Hospital and Hudson Headwaters Health Network a Federally Qualified Health Center (FQHC).

The partners invited to participate in the planning process were chosen because of their work with specific segments of the population that often have poorer health outcomes. Partner roles in the community health assessment process included identifying additional partners that should be involved in the planning process, providing or suggesting additional data sources and information, reviewing data, providing content-expertise, and selecting the health priorities.

Once the priority areas were identified the planning partners worked collectively to set goals and objectives to be included in the implementation plan. Once the goals and objectives were agreed upon partners identified evidence-based intervention strategies that could be implemented to promote positive change. Most of the intervention strategies selected are already being implemented by the partners.

Public engagement will be achieved by various methods. A continuous community feedback survey will be used to gather public input. Additional surveys may also be created to gather specific data about interventions included in the improvement plan. Along with the surveys, public engagement through in-person presentations and social media postings will be utilized.

Interventions & Strategies

The intervention strategies selected by the CHIP partners focus on three main areas

- Policy development – housing stability and affordability requires the adoption of policies that support housing infrastructure, rent stabilization, allocation of funding for low-income housing needs and support for families and individuals with low socio-economic resources.
- Increased training and access – many of the interventions for social and community context priorities involve increased training opportunities for providers and volunteers to be able to increase capacity for non-medical counseling, peer support programs, screening and referral services, community education and parent coaching programs.

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

- Increased access to medication and harm reduction strategies – providing access to Medication Assisted Treatment (MAT) for Substance Use Disorders (SUDs), such as opioid dependence. Increase access to naloxone to reduce fatal opioid overdoses and to harm reduction services to reduce the risk of opioid and other substance overdose.

For more details about the intervention strategies see the *Addressing Health Priority Areas* section of the Community Health Improvement Plan.

Progress & Evaluation

To measure progress Warren County Public Health will have to rely on our partners to provide periodic updates since they are primarily responsible for the implementation of most of the identified interventions. These updates will occur as part of regularly scheduled quarterly progress report meetings. Additional progress updates may be requested using project update forms or informal email requests.

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

Special Thanks

Warren County Public Health would like to thank all the individuals and organizations that volunteered to be part of the 2025-2030 Community Health Assessment & Improvement Plan process. This document is the result of ten months of planning and collaboration. It is because of the contributions of our volunteer committee members the Community Health Improvement Plan provides a relevant framework for addressing the priority health needs of Warren County. Their knowledge, expertise and willingness to actively engage in the planning process has helped establish goals and objectives for improving the health of Warren County residents. Committee members were also instrumental in providing information about evidence-based interventions that can be utilized within Warren County to meet the health goals and objectives found in the Community Health Improvement Plan. Many of the planning partners are also responsible for the implementation of the intervention strategies included in the plan. Without their ongoing contributions the CHA/CHIP process would lack direction and purpose.

Thank you sincerely,

Warren County Public Health CHA/CHIP Planning Staff

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

Purpose and Introduction

The purpose of completing a community health assessment is to identify areas of strength and areas of concern that are impacting the health outcomes and quality of life of people living in a community. The use of data, community feedback and stakeholder input provide local health departments and community partners with the information necessary to make informed decisions about current and future health initiatives. Once areas of concern or need are identified, a community health improvement plan can then be drafted to ensure the limited resources available to address areas of concern are appropriated in a meaningful way.

The Warren County 2025-2030 CHA/CHIP is a six-year plan that prioritizes and provides a framework to address the greatest health concerns of Warren County. Previous Warren County CHAs/CHIPs focused on traditional health outcomes and behaviors like preventive health screenings, tobacco use, reducing obesity rates, managing chronic disease, to guide health initiatives.

Although health outcomes remain an important part of the CHA/CHIP, this version expands on those outcomes to include Social Determinants of Health (SDOHs). Social Determinants of Health - where a person is born, grows, lives, works and ages - are well documented as having a larger impact on a person's health and well-being than almost any other factor. By incorporating SDOH in the planning process a foundation for health promotion, well-being, and health equity is being built.

Through the CHA/CHIP process Warren County Public Health and its partners have created a framework for building healthier communities through the implementation of evidence-based interventions. This process has also strengthened partnerships and identified resources that can be utilized to improve health outcomes in our communities.

Limitations to the CHA/CHIP do exist. Although efforts are made to bring a diverse group of people to the table to set the CHA/CHIP priorities, each person comes with their own implicit biases based on their own life and work experiences. Additionally, much of the data the group utilizes to set priorities is gathered from State and Federal sources and is often a few years old. This means that occasionally local data is not available or is limited in its usefulness due to small sample sizes or limited years of available data. Lastly, there is no requirement for community partners to participate in the CHA/CHIP process and there is no funding to incentivize them to participate either. This means that local health departments must recruit organizations to participate in the process by "selling" them on the benefits of being a part of the process which can lead to fewer diverse voices around the table.

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

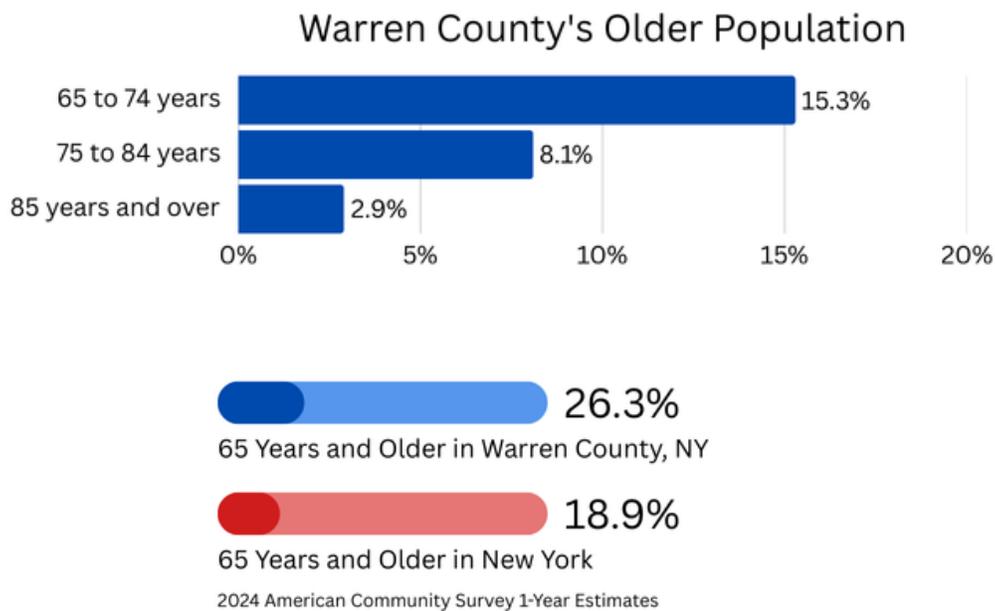

Service Area

Warren County Health Services serves the population of Warren County, New York. The service area includes 11 townships, 1 village and 1 small city (Glens Falls). The County covers 867 square miles with much of the County land resting in the Adirondack Park.

Demographics

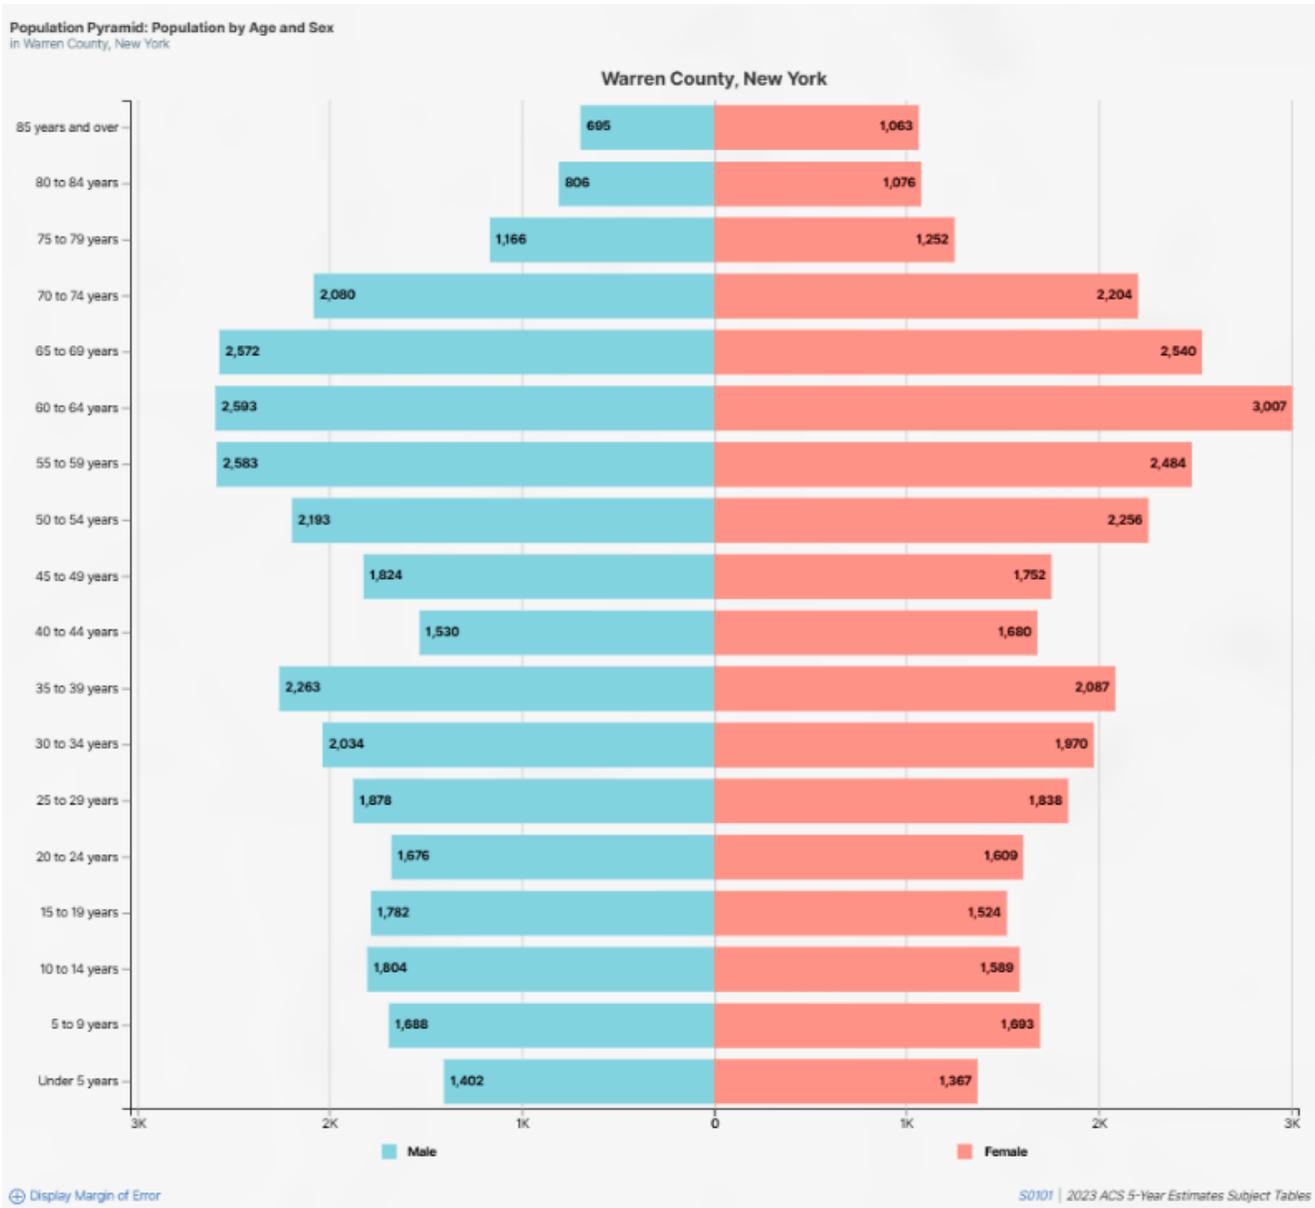

Age and Gender

Warren County is home to 65,737 people according to the 2020 census. Like many North Country counties in New York, Warren County has seen its overall population size remain relatively stable or shrink slightly. However, the number of people 65 years of age or older continues to grow. Estimates show approximately 26% of Warren County's population is 65 years of age or older. This is an increase from 24% in 2021. There are slightly more females than males living in Warren County across all ages. There is larger gap between females and males age 65+ with 3% more females than males.

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

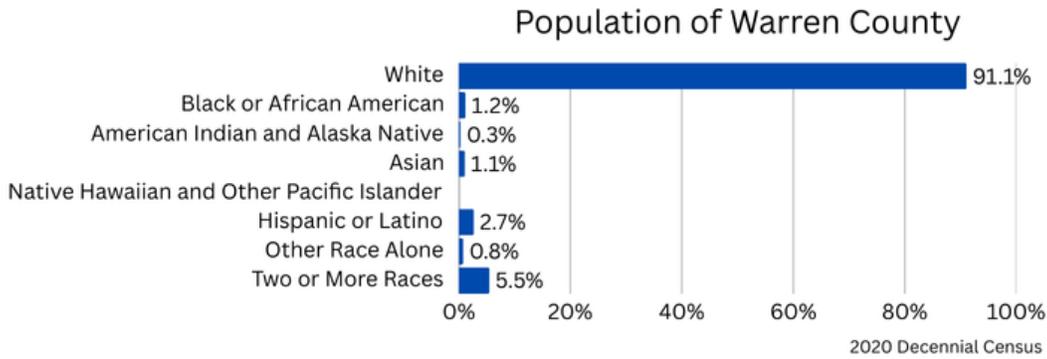

Race/Ethnicity

According to the US Census American Community Survey 91% of Warren County residents identify as white, 5.5% identify as two or more races, 2.7% Hispanic or Latino origin and 1.1% Asian. All other identified races are less than 1% according to the 2020 Census.

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

Languages Spoken

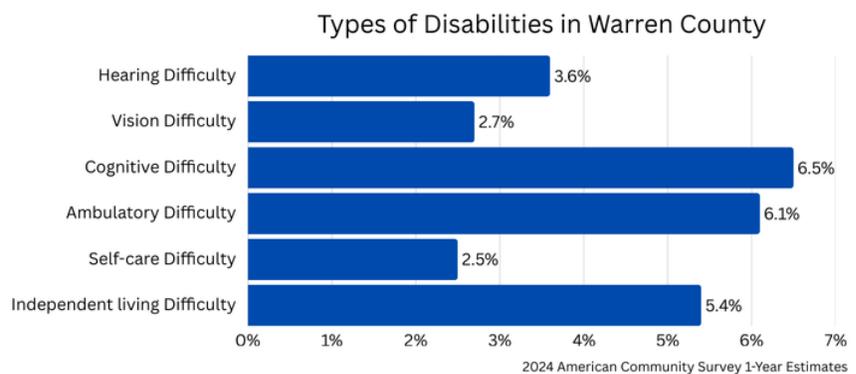

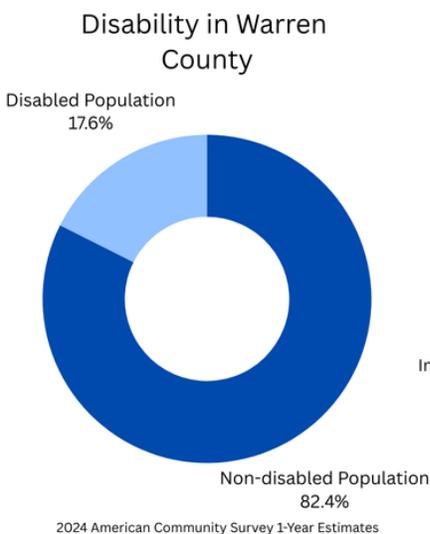

English is the primary language spoken at home for 98% of Warren County residents. This however, does not account for the potential of multi-lingual households.

Disability

American Community Survey (ACS) determines disability statistics by asking individuals about their difficulties in six key areas: hearing, vision, cognition, mobility, self-care, and independent living.

The ACS uses a specific set of questions to gather data on disability. These questions are designed to identify limitations in basic functioning and independent living.

In Warren County 17.6% of the population meets the criteria for disability. The top three categories of disabilities among the population meeting criteria are cognitive difficulty 6.5%, followed by ambulatory difficulty 6.1%, and independent living difficulty 5.4%.

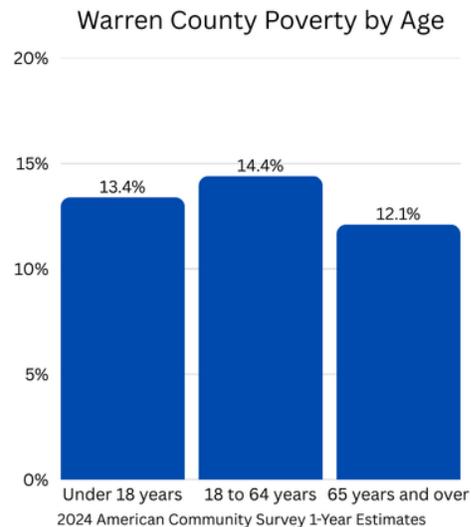

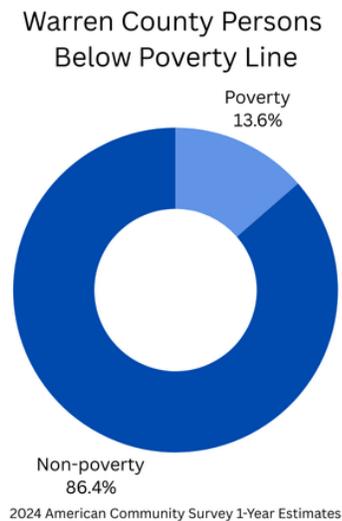

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

Socioeconomic Data

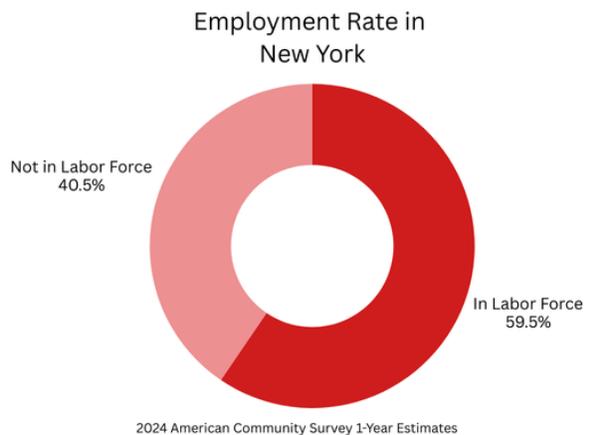

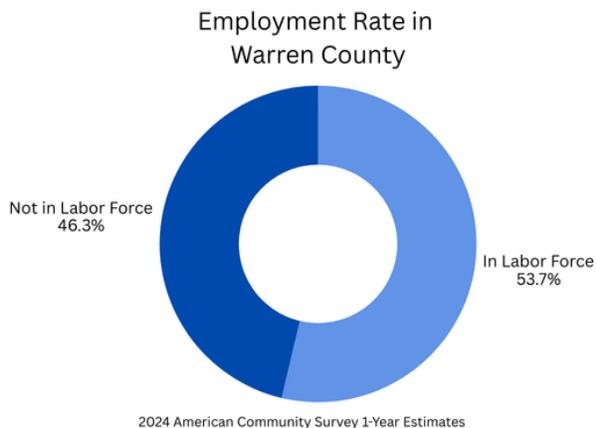

Poverty

The total population in Warren County estimated to be living at or below the federal poverty line is 13.6%. This is similar to New York State at 14.0%. The percentage of children under 18 years old that are living at or below the poverty line in Warren County is approximately 13.4% and 12.1% for seniors 65 years and older. These are lower than the New York State percentages of 17.9% for children under 18 and 14% for seniors 65 and older (Source: 2024 American Community Survey 1-year estimate).

Employment & Income

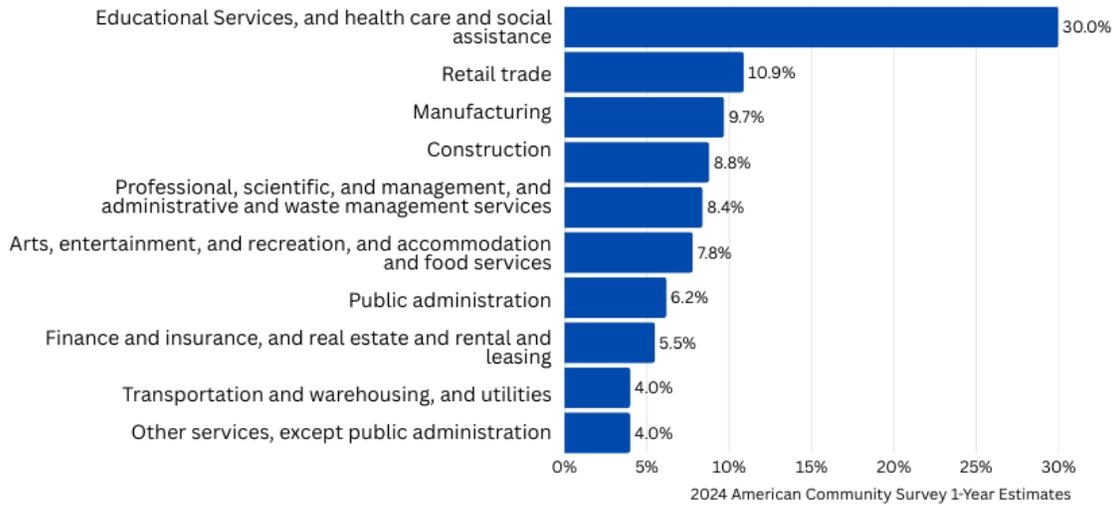

The employment rate in Warren County is 53.7% for the population 16 years and over, which is lower than New York State 59.5%. Industries that employ the highest percentage of the workforce are Educational/Health care/Social assistance at 30%, followed by Retail 10.9%, Manufacturing 9.7%, Construction 8.8%, and Professional/Scientific/Management/Administrative/Waste Management 8.4%. Other industry sectors each employ less than 8 percent of the workforce (Source: 2024 American Community Survey 1-year estimate).

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

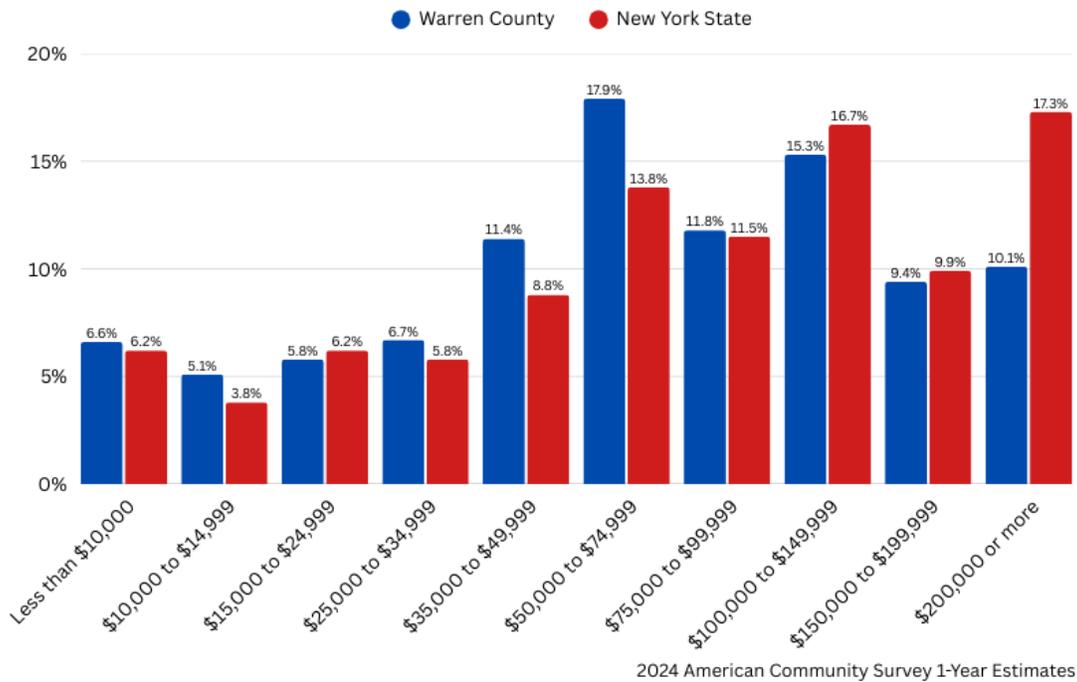

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

Industry for the Civilian Employed Population 16 Years and Over in Warren County

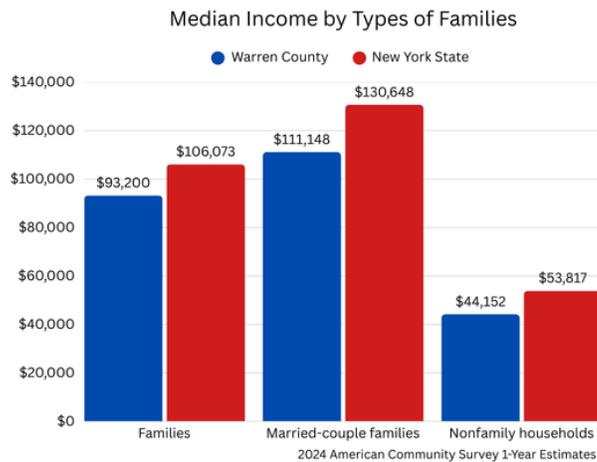

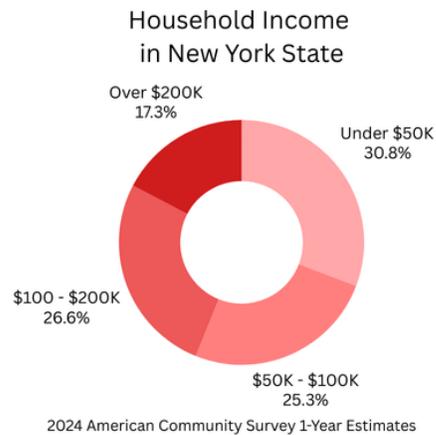

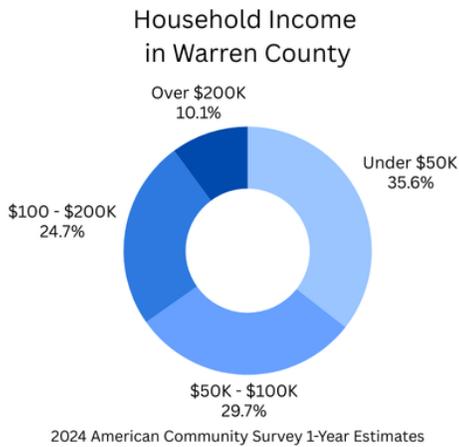

The median income for households in Warren County is \$69,695 which is lower than New York State at \$85,820. Families in Warren County have a median income of \$93,200 this number increases to \$111,148 for married families and drops significantly for nonfamily households to \$44,152. Approximately 65% of Warren County households have an annual income of less than \$100,000, compared to 56% of New York State households.

Household Income

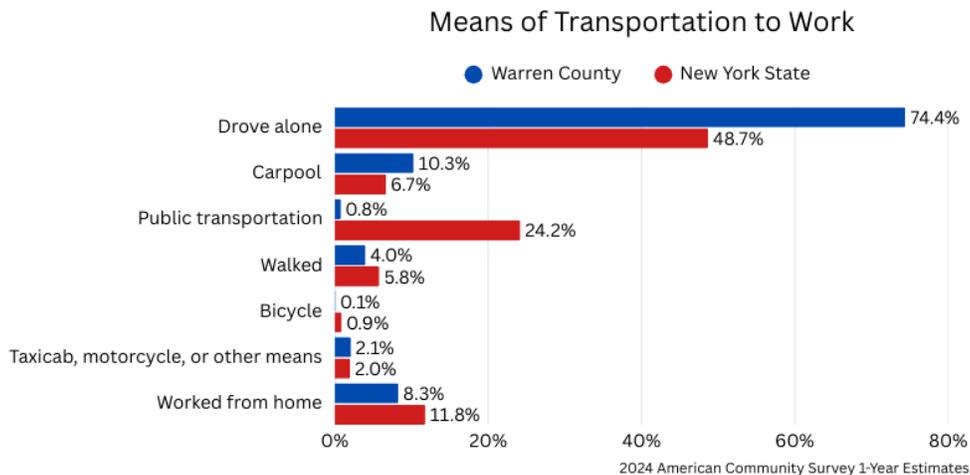

† Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

Travel/Modes of Transportation to Work

The average travel time to work for Warren County residents is 23 minutes. This is lower than the 33 minutes for all of New York. Seventy-four percent of Warren County residents drive alone to work, 10.3% carpool, 4% walk and 8.3% work from home. In comparison for the rest of New York 48.7% of residents drive alone, 6.7% carpool, 5.8% walk, and 11.8% work from home. Additionally, 24.2% of New York residents use public transportation to get to work, but less than 1% of Warren County residents use public transportation to get to work.

† Margin of error is at least 10 percent of the total value. Take care with this statistic.

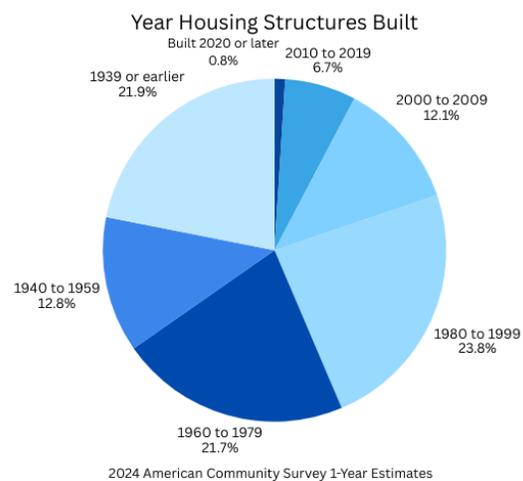

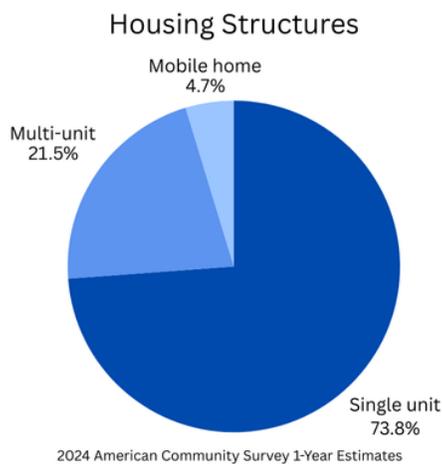

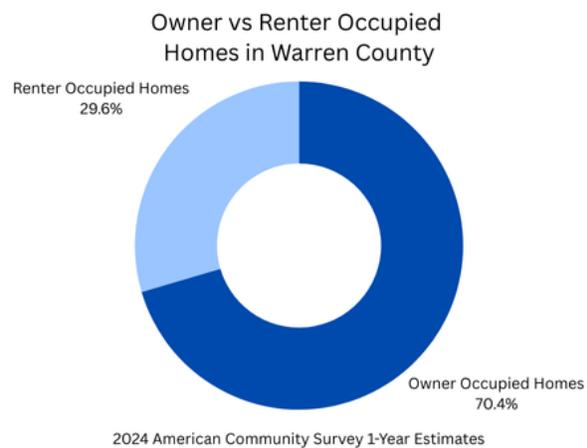

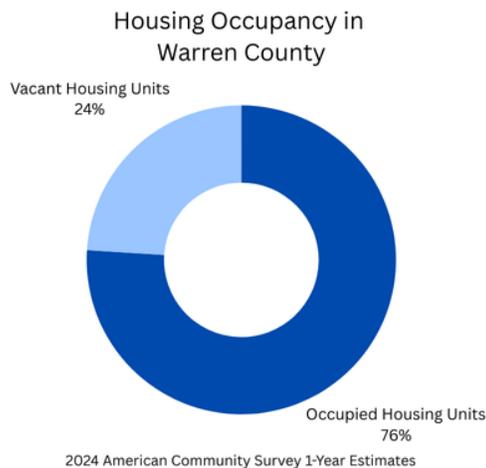

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

Housing/Affordability

Housing Units

There are an estimated 40,700 housing units in Warren County. Single unit structures make up 73.8% of the housing, 21.5% are multi-unit structures, and mobile homes make up 4.7% of housing structures. Seventy-six percent of housing structures are occupied.

Approximately 70% of occupied housing structures are owner occupied with the additional 30% being renter occupied. Homeownership in Warren County is higher than the New York State rate of 54.3%. The median value of owner-occupied housing units in Warren County is \$311,400, and the median gross rent is \$1,128 (Source: U.S. Census Bureau (2024). *American Community Survey 1-year estimates, Table B25077*. Retrieved from <https://data.census.gov/table/ACSDT1Y2024.B25077?q=warren+county+ny+median+value+of+housing&t=Housing+Value+and+Purchase+Price>).

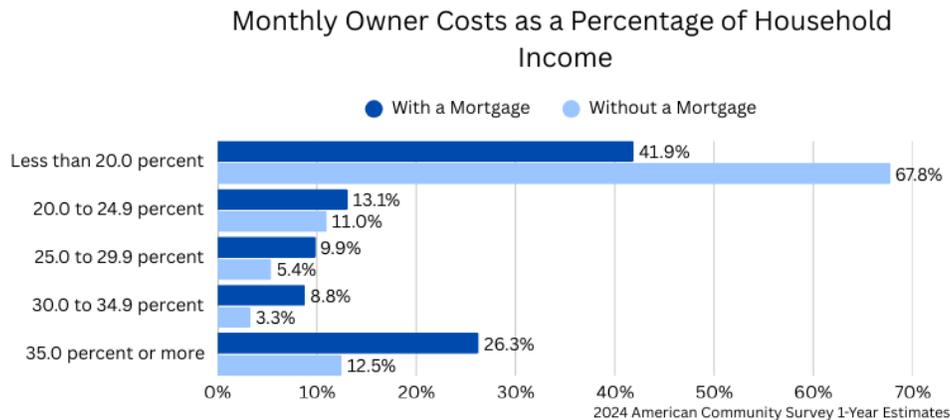

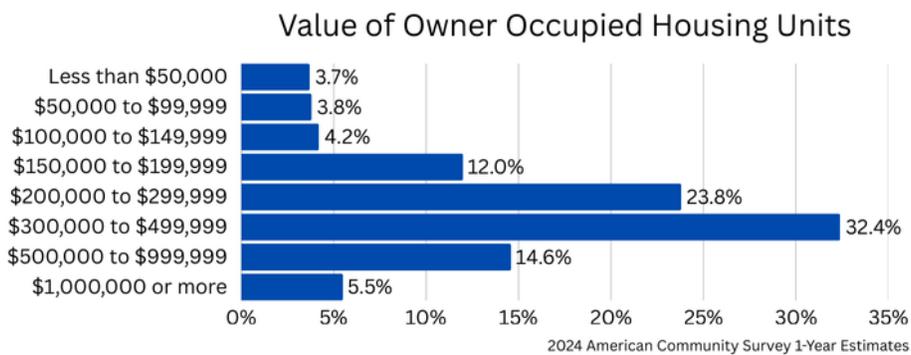

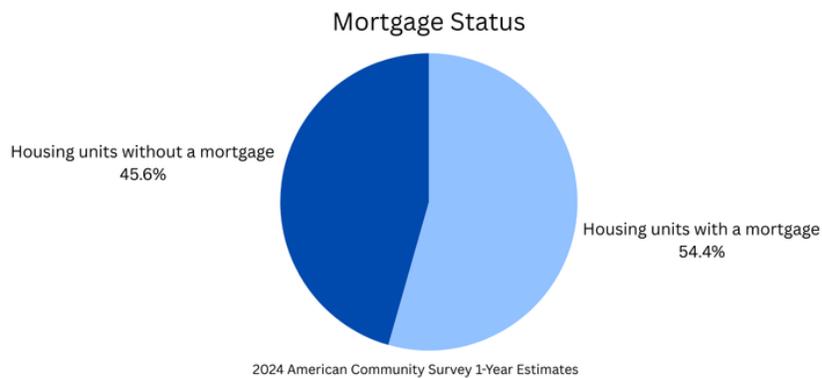

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

Housing Costs

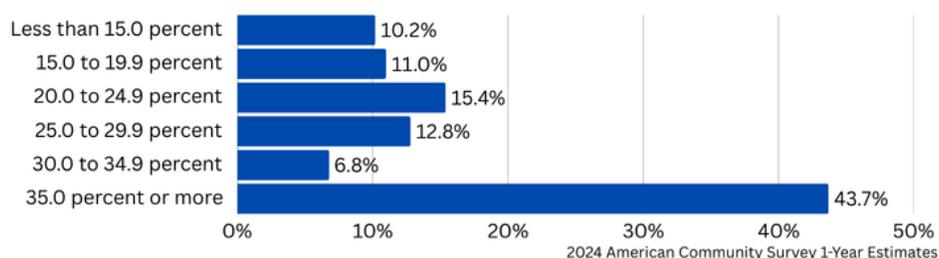

When looking at housing costs the 30% rule suggests that housing costs (including rent or mortgage payments, property taxes, and insurance) should not exceed 30% of gross monthly income. According to the American Community Survey 2024, 1-year estimate, 35% of housing units with a mortgage exceed the 30% guideline, 15.8% of housing units without a mortgage also exceed the guideline. For renter occupied units 50.5% exceed the 30% guideline. Households with an income of \$75,000 or more on average spend 46.3% of their income on housing costs (Source: U.S. Census Bureau (2024). *American Community Survey 1-year estimates*).

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

Gross Rent as a Percentage of Household Income

Health Systems

Warren County is home to one hospital, Glens Falls Hospital, which has 391 hospital beds, primarily designated for medical and surgical care. When factoring in the county’s overall population, this results in a hospital bed rate of 598.0*, which is higher than the ARHN region rate of 258.7*.

The county has four nursing home facilities, providing a total of 399 nursing home beds, creating a nursing home bed rate of 610.3. Additionally, there are five adult care facilities with a combined total of 424 beds, giving an adult care facility rate of 648.5. The nursing home bed rate is lower than ARHN 667.4, while adult care facility bed rate is higher than the ARHN region 338.0. Warren County’s physician rate is 347.2, which exceeds the ARHN region’s rate of 190.2.

The county’s ratio of population to primary care physicians 900:1 is significantly lower than the New York State ratio 1240:1, indicating greater access to primary care with one physician per 900 residents. The ratio of population to mental health providers is 210:1, also lower than the State ratio 260:1. Warren County has a population-to-dentists ratio of 1130:1, which is the lowest in the ARHN region, and lower than the New York State ratio of 1200:1. Fifty-four percent of female Medicare enrollees aged 65-74 in Warren County received an annual mammography screening, the second highest in the ARHN region, surpassing the state average of 44%.

Healthcare Access/Insurance

According to the latest data available on the New York State Community Health Indicator Reports – Warren County 97.5% of children <19 years old had health insurance. The percentage of adults in Warren County ages 18-64 years old that report having health insurance is 94.5%. The percentage of population with Medicaid/means-tested public coverage in Warren County is 21%.

The percentage of Warren County residents that were unable to receive medical care due to costs is 3.9%. The percentage of Warren County adults that report having a regular healthcare provider is 88.1%

Education System

School Districts

Warren County is served by nine school districts, with a total enrollment of 7,919 students. Of these, 42.0% qualify for free or reduced lunch, with the majority (96.8%, or 3,147 students) eligible for free

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

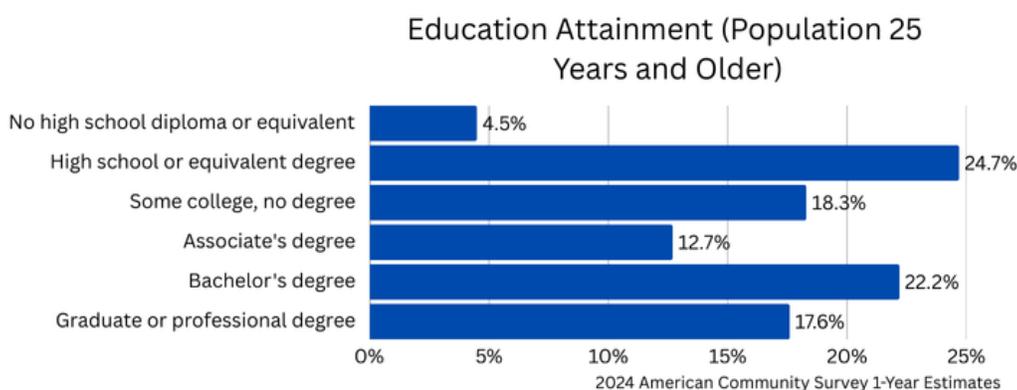

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

lunch. The county graduates 667 high school students annually, with a dropout rate of 9.0%. This rate is higher than the ARHN region’s rate of 6.6% and New York State’s rate of 5.0%.

The county employs 790 teachers, resulting in a student-to-teacher ratio of 9.8, which is slightly higher than the ARHN region's ratio of 9.6, but lower than the NYS ratio of 11.2. For additional K-12 education profile data see Appendix E

Educational Attainment

Approximately 95.5% of Warren County residents 25 years and older are high school graduates or higher. This is higher than the rest of New York State at 88%. Regarding higher education, 39.8% of residents 25 years and older have a bachelor’s degree or higher which is slightly lower than New York State at 41.2% (Source: U.S. Census Bureau (2024). *American Community Survey 1-year estimates*).

The Health Status of Warren County Residents

Data Sources and Collection Methods

To assess the health status of Warren County residents as part of the 2025-2030 Community Health Assessment (CHA) Warren County Public Health contracted with Adirondack Health Institute (AHI) to assist with data collection and analysis. Warren County Public Health staff served on the AHI CHA data sub-committee and helped identify potential data sources for AHI’s consideration in the development of the Warren County and regional CHA.

AHI provides data collection and analysis to Clinton, Essex, Franklin, Fulton, Hamilton, and Washington counties. These counties also provide input on data sources, collection and analysis. A regional data comparison is provided by AHI that includes all participating Counties. The data methodology utilized by AHI to provide the data collection and analysis can be found in Appendix A.

In addition to the data collection provided by AHI, Warren County Public Health conducted a community health feedback survey to gather input directly from residents of Warren County. The survey was developed internally, utilizing questions from various community health surveys from Counties in and outside of New York State. The survey was posted online using a Google Form and included multiple choice options. Most questions were written as “pick your top three” “pick your top five” or “select all that apply”. The survey can be found in Appendix B.

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

Most of the health data included in this CHA came from New York State databases. Sources include the NYS Prevention Agenda Dashboard, NYS County Health Indicator Reports, NYS Behavioral Risk Factor Surveillance System (BRFSS), which organize data for easier navigation from multiple data collection systems (e.g. Statewide Planning and Research Cooperative System (SPARCS), NYS Vital Statistics, NYS Cancer Registry etc.). Demographic data for Warren County was mostly gathered from the US Census Bureau's American Community Survey. Education data came from a mix of NYS State Education Department data and US Census data.

Community Engagement

To create a robust community health assessment community engagement is essential. Multiple community engagement strategies were utilized to support this CHA.

Gathering feedback from stakeholders across a variety of professional disciplines provided unique perspectives about what is believed to impact the health of our community. To gather these perspectives a stakeholder survey was created with input from all the AHI CHA partners (see Appendix C). The survey was sent by email to frontline workers, management, and leadership contacts provided by Warren County and other AHI partners. Follow-up emails were sent to encourage survey completion.

Input from community members was sought in addition to feedback from stakeholders. Warren County Public Health staff created a community feedback survey using a Google Form (see Appendix B). The survey was posted online and promoted through social media from March 2025 until September 2025. QR code postcards were also distributed at health fairs and community events. It was shared with partner agencies who were asked to request their consumers complete the survey. The survey was also advertised in several newsletters. 136 responses were received and analyzed.

Input from community partners came from direct interactions through the CHA/CHIP planning process. Fifteen community partners agreed to participate on the CHA/CHIP planning committee. Warren County Public Health worked directly with ACSEND Mental Wellness, Family Services Association of Glens Falls, Glens Falls Hospital, Hudson Headwaters Health Network, Office of Community Services (County mental health unit), Open Door Mission, Southern Adirondack Independent Living Center, Southern Adirondack Childcare Network, Warren County Department of Social Services, Warren County Workforce Development, Warren County Planning Department, The WAIT House, Glens Falls Supervisor Ward 5, and Warren County Office for the Aging.

Preliminary findings of the data review and survey results were shared with the CHA/CHIP planning committee through online and in-person planning meetings along with constant email communication.

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

Relevant Health Indicators

Chronic Disease

All Cancers

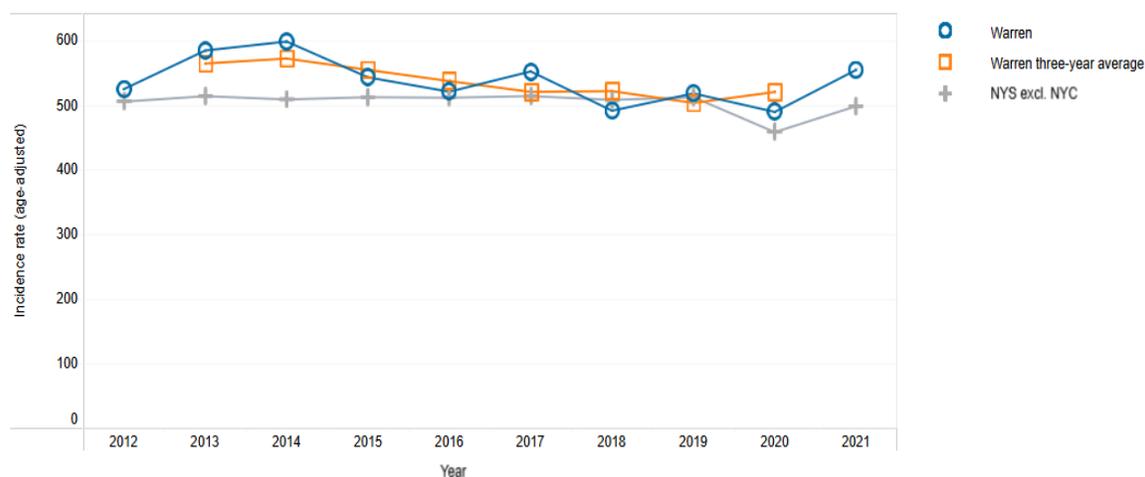

Cancer is a group of diseases where abnormal cells grow out of control and crowd out normal cells. It affects 1 in 3 people in the United States. From 2013 -2022 cancer was the first or second leading cause of death in Warren County (Source: Vital statistics data as of August 2024).

The overall age-adjusted cancer rate in Warren County is slightly elevated. The latest 3-year average rate for all cancers is 519.9*. This rate is higher than the age-adjusted NYS excl. NYC rate of 458.2*. Since 2013 the three-year age-adjusted rate for all cancer in Warren County has shown a slight decline.

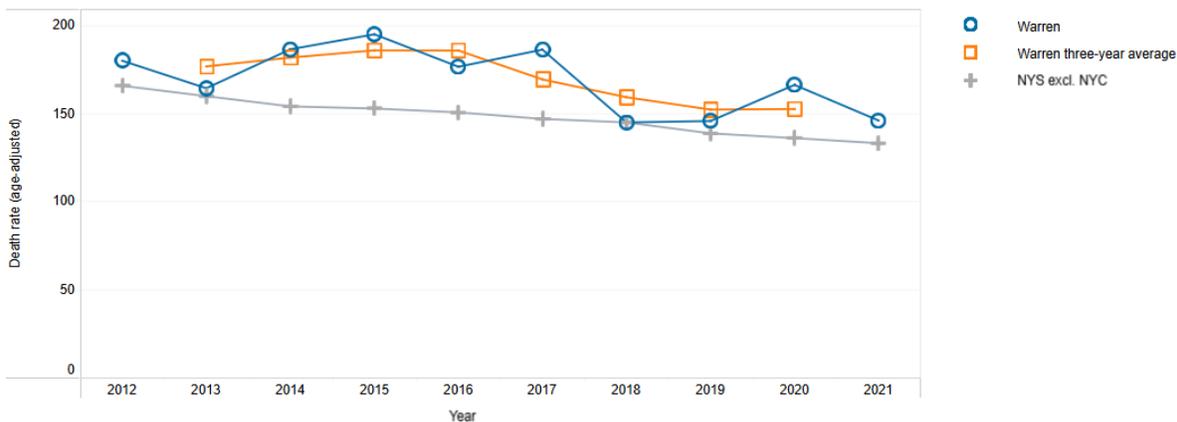

Source: NYS Community Health Indicator Reports Dashboard, Accessed Oct. 14th, 2025.

The three-year average age-adjusted mortality rate for all cancers in Warren is 152.4 which is higher than the NYS rate excl. NYC of 124.8. Warren County has seen a steady drop in the three-year average cancer mortality rate since 2016. Source: NYS Community Health Indicator Reports Dashboard, Accessed Oct. 14th, 2025.

Age-adjusted all cancer incidence rate per 100,000, Warren

Age-adjusted all cancer mortality rate per 100,000, Warren

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

Colorectal Cancer

In the United States, colorectal cancer (CRC) is the third most diagnosed cancer and the third leading cause of cancer death in both men and women. A recent American Cancer Society report casts a spotlight on an emerging and highly concerning fact — one in five people diagnosed with CRC are now under the age of 55⁷.

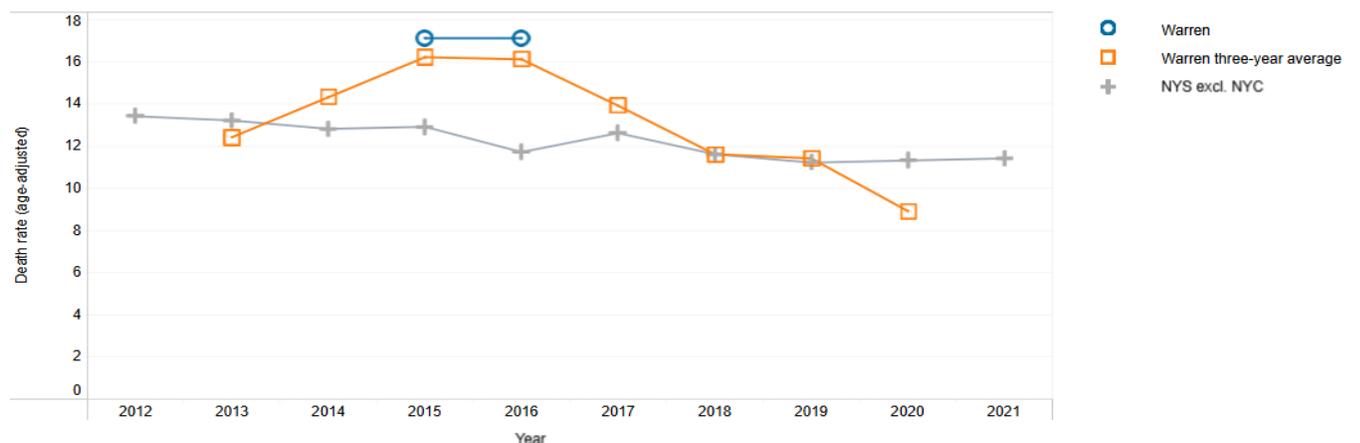

In Warren County the age-adjusted three-year average rate of colorectal cancer is 32.1 which is lower than the NYS rate excl. NYC of 35. Three-year colorectal cancer rates had been declining in Warren County from 2013-2018 but saw a slight increase from 2019-2021. *Source: NYS Community Health Indicator Reports Dashboard, Accessed Oct. 16th, 2025*

The three-year age adjusted mortality rate for colorectal cancer in Warren County is 8.9 which is lower than the NYS rate excl. NYC of 10.8. On a positive note, Warren County has seen three-year colorectal cancer mortality rates decline consistently from 2016-2020. *Source: NYS Community Health Indicator Reports Dashboard, Accessed Oct. 16th, 2025*

Female Breast Cancer

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

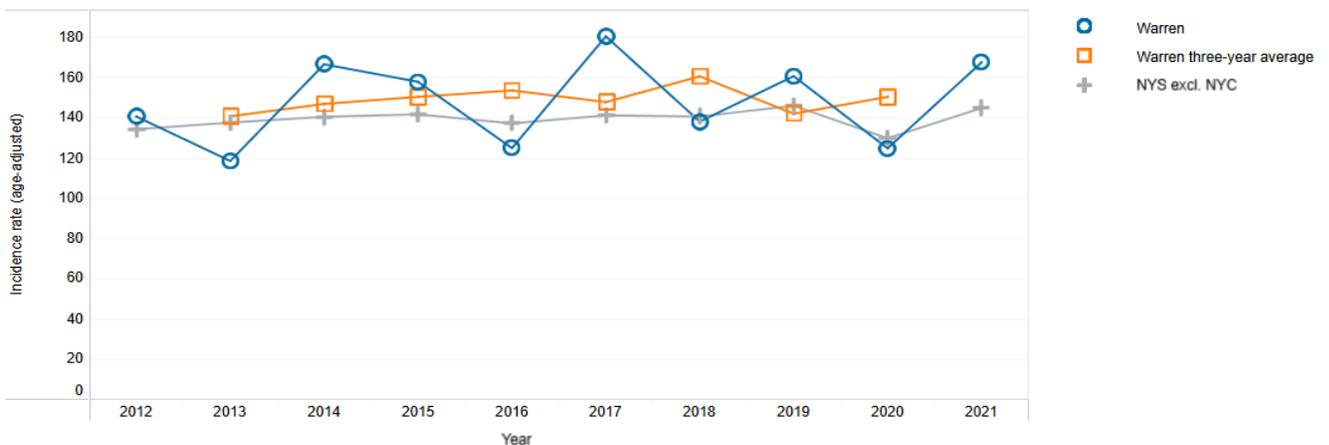

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

According to the American Cancer Society, breast cancer is the most common cancer in women in the United States, except for skin cancers. It accounts for about 30% (or 1 in 3) of all new female cancers each year. The median age at the time of breast cancer diagnosis is 62⁸. This means half of the women who developed breast cancer are 62 years of age or younger when they are diagnosed. *Source: NYS Community Health Indicator Reports Dashboard, Accessed Oct. 16th, 2025*

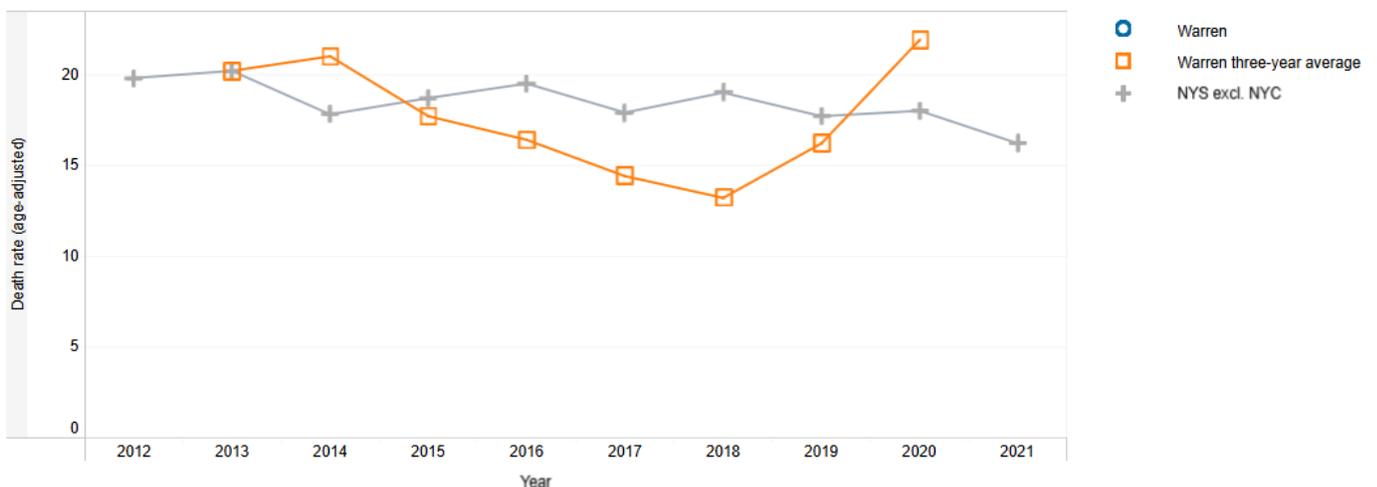

The female breast cancer three-year age-adjusted incidence rate in Warren County is 150.3 which is higher than the NYS rate excl. NYC of 134.2. Rates of female breast cancer in Warren County have remained relatively constant since 2013. *Source: NYS Community Health Indicator Reports Dashboard, Accessed Oct. 16th, 2025*

The female breast cancer three-year age adjusted mortality rate in Warren County is 21.9 which is higher than the NYS rate excl. NYC of 16.9. Female breast cancer mortality rates for Warren County were lower than the NYS rate excl. NYC from 2015-2019 but rose above the rate in 2020. *Source: NYS Community Health Indicator Reports Dashboard, Accessed Oct. 16th, 2025*

Prostate Cancer

According to the American Cancer Society about 1 in 8 men will be diagnosed with prostate cancer during their lifetime. Prostate cancer is the second-leading cause of cancer death in American men, behind only lung cancer. About 6 in 10 prostate cancers are diagnosed in men who are 65 or older, and remains rare in men under 40. The average age of men when they are first diagnosed is approximately 67 years⁹.

In Warren County the age-adjusted three-year rate of prostate cancer is 133.4 which is higher than the NYS rate excl. NYC of 131.6. Warren County's prostate cancer incidence rate has followed a similar pattern of rate change as NYS rate excl. NYC. *Source: NYS Community Health Indicator Reports Dashboard, Accessed Oct. 16th, 2025*

The prostate cancer three-year mortality rate in Warren County is 13.4 which is lower than the NYS rate excl. NYC of 15.2. Warren County has seen a general decline in prostate cancer mortality rates since 2013. *Source: NYS Community Health Indicator Reports Dashboard, Accessed Oct. 16th, 2025*

Preventive Cancer Screenings

Preventive cancer screenings play an important role in reducing morbidity and mortality rates for people diagnosed with cancer. Early detection can increase survival rates and reduce the need for more invasive cancer treatments.

According to the latest data available (2018) the percentage of adults in Warren County aged 50-64 that received a colorectal cancer screen based on current guidelines is 74.2% which is higher than the North Country rate 66.2% and NYS excl. NYC 66.5%. Warren County's rate is higher than the NYS Prevention Agenda objective 66.3%. *Source: NYS Prevention Agenda Tracking Dashboard, Accessed November 12th, 2025.*

In Warren County the percentage of women aged 50-74 that have received a breast cancer screening based on current guidance was 77.1% which is similar to the North Country rate 77.4% and lower than NYS excl. NYC rate 78.8%. *Source: NYS Community Health Indicator Reports Dashboard, Accessed Nov. 13th, 2025.*

In Warren County according to the latest data (2018) the percentage of women aged 21-65 that have received a cervical cancer screening based on current guidance was 90.4% which is higher than the North Country rate 82.4% and the NYS rate excl. NYC 86.1%. *Source: NYS Community Health Indicator Reports Dashboard, Accessed Nov. 13th, 2025.*

No data was able to be found regarding prostate cancer screening rates in Warren County.

Cardiovascular Disease

Cardiovascular disease is the broad term used to describe numerous conditions that affect the heart and blood vessels. Heart disease has been either a leading cause of or second leading cause of death in Warren County from 2013 -2022 according to NYS Vital Statistics (Source: NYS Vital Statistics as of August 2024)

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

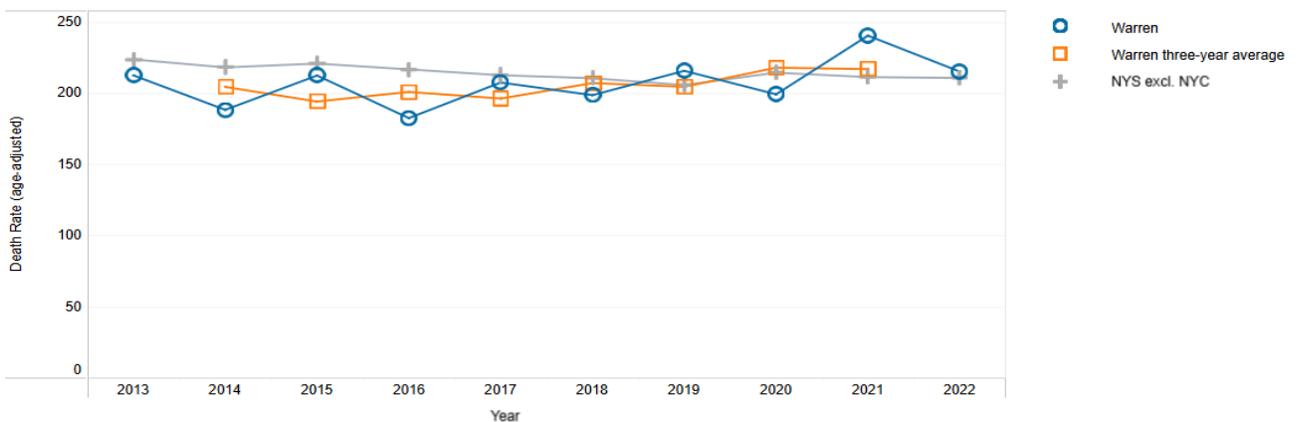

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

The cardiovascular disease age-adjusted three-year average mortality rate in Warren County is 216.7 which is slightly higher than the NYS rate excl. NYC of 213.8. The Warren County mortality rate has remained stable from 2014-2021. *Source: NYS Community Health Indicator Reports Dashboard, Accessed Oct. 20th, 2025.*

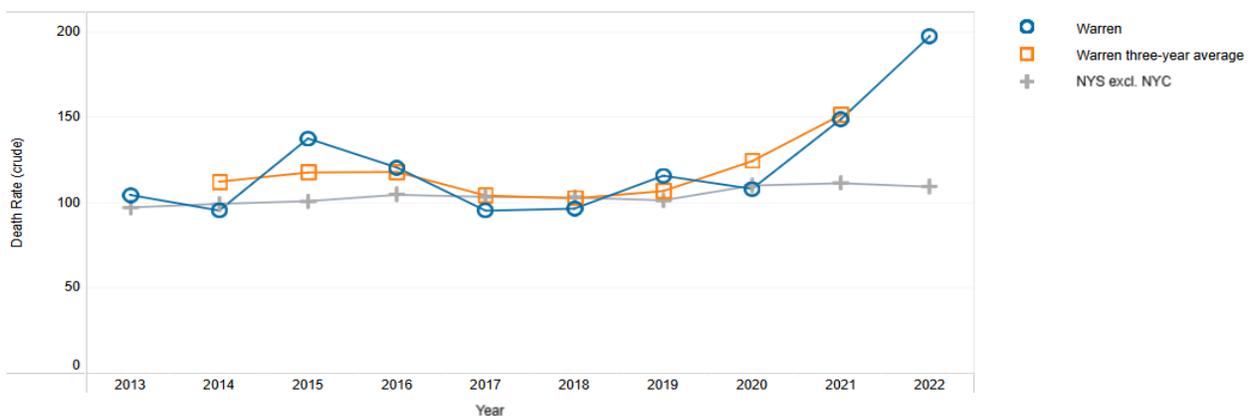

Warren County has a three-year average cardiovascular disease premature death (ages 35-64) rate of 151.2 which is noticeably higher than the NYS rate excl. NYC of 113.6. It should also be noted that Warren County has experienced a sharp rise in in the three-year average cardiovascular disease premature death rate from 2018-2021 with the rate rising from 102.3 to 151.2 over that time. *Source: NYS Community Health Indicator Reports Dashboard, Accessed Oct. 20th, 2025.*

The three-year cardiovascular disease hospitalization rate in Warren County is 102.7 per 10,000 which is lower than the NYS rate excl. NYC of 108 per 10,000. CVD hospitalization rates in Warren County have been trending lower since 2018. *Source: NYS Community Health Indicator Reports Dashboard, Accessed Oct. 20th, 2025.*

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

Diabetes is a chronic disease that affects how the body uses glucose (sugar) for energy. There are two major types of diabetes

- **Type 1:** The body's immune system destroys the cells in the pancreas that produce insulin, leading to a lack of insulin production.
- **Type 2:** The body does not use insulin effectively, resulting in high blood sugar levels.

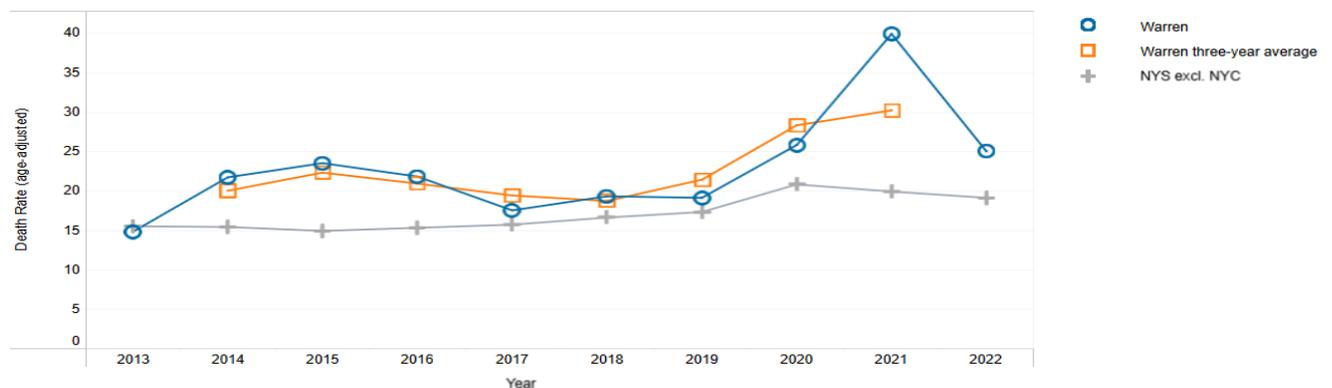

Diabetes can lead to serious complications including heart disease, stroke, kidney damage, nerve damage, and vision loss or other eye problems. Type 2 is the most common form in the United States, accounting for 90% - 95% of diabetes cases¹⁰. *Source: Cleveland Clinic website my.clevelandclinic.org/health/diseases/7104-diabetes: Accessed Oct. 21st, 2025*

The age-adjusted three-year diabetes mortality rate in Warren County is 30.2 which is higher than the NYS rate excl. NYC of 19.5. The diabetes mortality rate in Warren County has increased from 2018-2021 from 18.7 to 30.2. *Source: NYS Community Health Indicator Reports Dashboard, Accessed Oct. 21st, 2025.*

Age-adjusted asthma hospitalization rate per 10,000, Warren

Obesity

The World Health Organization (W.H.O.), along with National and International Medical and Scientific Societies, now recognize obesity as a chronic progressive disease resulting from multiple environmental and genetic factors.

Based on the 2022 Behavioral Risk Factor Surveillance System (BRFSS) age-adjusted data 70.9% of Warren County adults had a self-reported Body Mass Index (BMI) of 25 or greater at which point someone is considered overweight or obese¹¹. When BRFSS data is broken out further the age-adjusted percentage of adults in Warren County with obesity is 33.5%.[^] *Source: NYS Community Health Indicator Reports Dashboard, Accessed Oct. 22nd, 2025.*

[^] It must be noted that BMI has limitations when measuring overweight/obesity. Limitations include

1. Does not Differentiate Body Composition:

BMI does not distinguish between muscle, bone, and fat mass. This means that individuals with high muscle mass (e.g., athletes) may have a high BMI even if they have a low percentage of body fat.

2. Overestimates Body Fat in Certain Groups: BMI may overestimate body fat in individuals with certain conditions, such as:

- Older adults
- People with low muscle mass
- People with certain medical conditions (e.g., osteoporosis)

3. Underestimates Body Fat in Certain Groups:

BMI may underestimate body fat in individuals with: High levels of visceral fat (fat around the organs) and/or short stature.

4. Not a Direct Measure of Health Risk:

BMI does not directly measure health risks such as cardiovascular disease or diabetes. It is only an indicator of potential health risks, which may vary depending on other factors such as age, sex, and ethnicity.

5. Does Not Account for Body Fat Distribution:

BMI does not consider where body fat is distributed (e.g., central obesity vs. peripheral obesity). This is important because central obesity is associated with higher health risks than peripheral obesity.

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

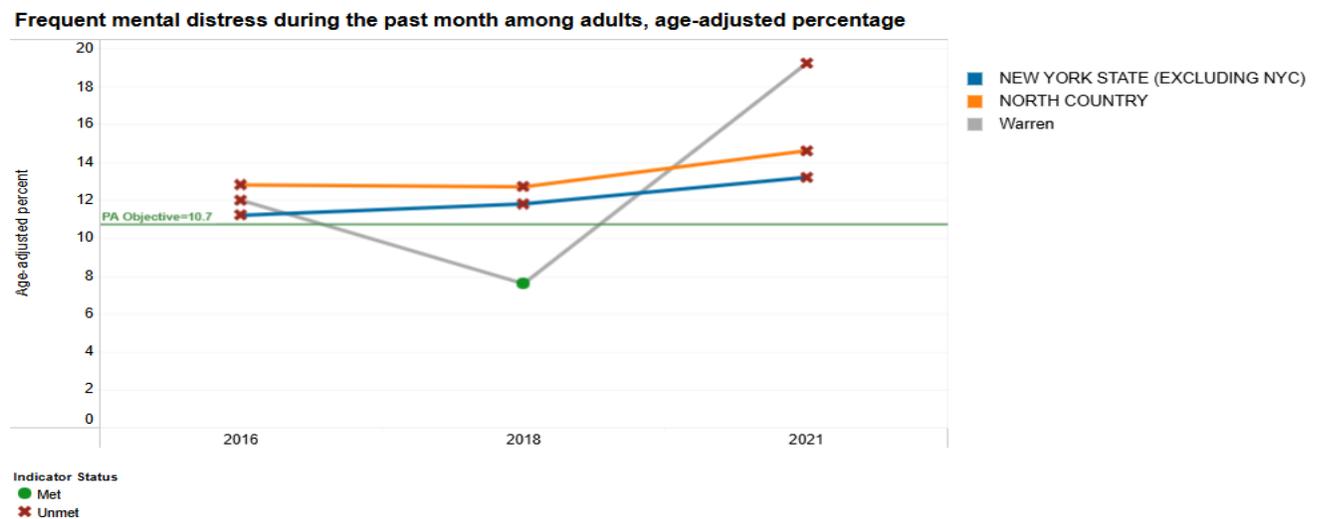

It is one of several measures that should be considered when measuring a person’s risk for obesity along with a clinical assessment.

Mental Health & Substance Use Disorders

Mental health, physical health, and substance use are interconnected, with a complex relationship where each can influence and worsen the others. Substance use can trigger or worsen mental health issues, while mental health conditions can lead individuals to self-medicate with substances, creating a cycle that also negatively impacts physical health.

Mental Distress

Approximately 19.2% of Warren County adults experienced frequent mental distress in the past month (respondents (ages 18 or older) who reported having 14 or more days of poor mental health during the past month) according to BRFSS data from October 2022. The percentage is adjusted for age. This is higher than the North Country rate of 14.6% and NYS rate excl. NYC of 13.2%. The Warren County rate also exceeds the NYS Prevention Agenda objective of 10.2%. *Source: NYS Prevention Agenda Tracking Dashboard, Accessed October 22nd.*

Adverse Childhood Experiences (ACEs)

According to the CDC, adverse childhood experiences, or ACEs, are potentially traumatic events that occur in childhood (0-17 years). Also included are aspects of the child’s environment that can undermine their sense of safety, stability, and bonding. ACEs can have lasting effects on health and well-being in childhood and life opportunities (such as education and job potential) well into adulthood.

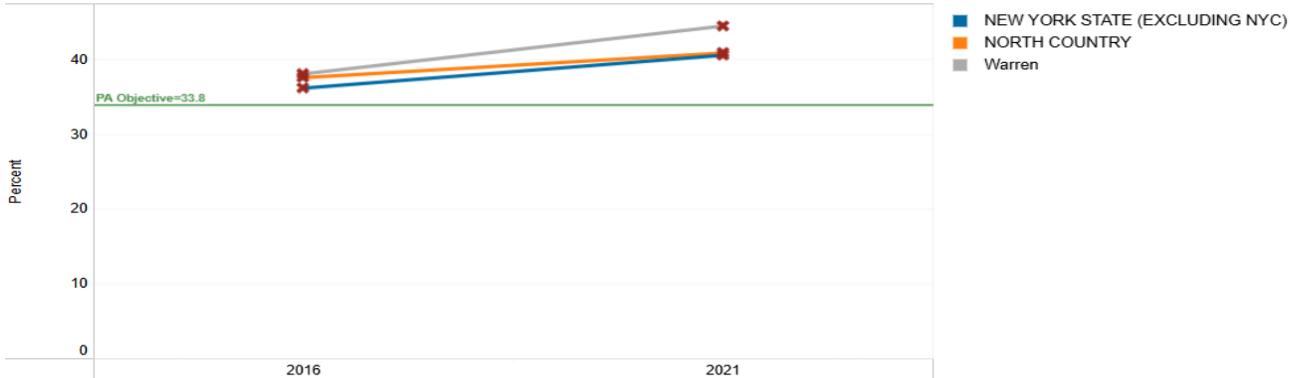

The percentage of Warren County adults who reported two more ACEs is 44.4% which is higher than the North Country percentage of 40.8% and NYS rate excl. NYC of 40.5%. Warren County’s percentage is also higher than the NYS Prevention Agenda Objective of 33.8%. *Note: the percentage for Warren County is*

Climate Smart Community

Warren County is a Bronze Certified Climate Smart Community. One-hundred percent of the population now lives in a certified Climate Smart Community. This is higher than the North Country at 30.5% and NYS rate excluding NYC 61.6%. This also exceeds the NYS Prevention Agenda objective of 8.6%. *Source: NYS Prevention Agenda Tracking Dashboard, Accessed October 27th, 2025.*

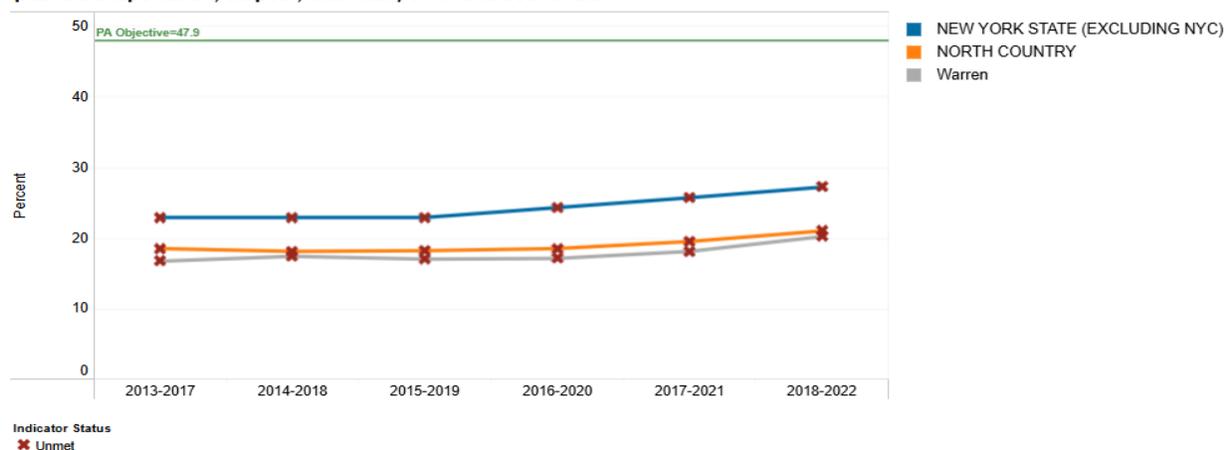

According to the Warren County Planning Department, Climate Smart Taskforce website¹⁵ Warren County received Bronze Certification in May 2020 and was recertified in July 2025. On June 24, 2019, the Warren County Board of Supervisors voted unanimously to adopt the Climate Smart Communities Pledge and become a Registered Climate Smart Community. This designation demonstrates a commitment by county leadership to advance actions that mitigate influencing factors of global climate change and reduce their anticipated impacts¹⁵.

Alternate Modes of Transportation

Having access to public transportation along with bikeable and walkable communities can decrease pollution through a reduction of internal combustion vehicles on the road. Communities that support biking and walking may also benefit from a more active population. The benefits of increased physical activity are well documented¹⁶.

In Warren County 20.2% of people who commute to work use an alternate mode of transportation or telecommute. This is similar to the North Country 21% but lower than the NYS rate excl. NYC 27.2%. Warren County is also lower than the NYS Prevention Agenda objective 47.9%. *Source: Prevention Agenda tracking dashboard, Accessed October 28th, 2025.*

Maternal, Child and Infant Health

The importance of maternal and child health (MCH) lies in ensuring the well-being of women and children, preventing deaths and diseases, and laying the foundation for the next generation's health and future success. Prioritizing MCH leads to healthier child development, better educational and financial outcomes, and improved mental and social well-being for families. It's crucial for reducing mortality and

complications during pregnancy and childbirth, identifying health risks early, and supporting families throughout the crucial pregnancy and early childhood periods.

Maternal/Infant Mortality Rates

From 2013 – 2022 Warren County has zero reported maternal deaths. This rate is better than the North Country rate which is unstable at 27.3 per 100,000 live births and the NYS rate excl. NYC 22.6. Warren County has met the NYS Prevention Agenda objective of 16. *Source: Prevention Agenda tracking dashboard, Accessed October 28th, 2025.*

The infant mortality rate in Warren County per 1,000 live births is unstable due to limited number of events, but is currently at 5.6 which is lower than the North Country rate 6.2 but higher than the NYS rate excl. NYC 4.7. Warren County's infant mortality rate has fluctuated wildly from 2013-2022. Since 2013 thirty infants less than 1 year old have died in Warren County. *Source: Prevention Agenda tracking dashboard, Accessed October 28th, 2025.*

When infant mortality rates are broken out further by neonatal, post-neonatal, fetal and perinatal mortality rates, most are unstable but may provide clues about pregnancy and birth outcomes in Warren County.

The Warren County three-year mortality crude rate (unstable) for neonatal (<28 days) infants is 4.5 which is higher than the NYS rate excl. NYC 2.6. *Source: NYS Community Health Indicator Reports Dashboard, Accessed Oct. 28th, 2025.*

The Warren County three-year mortality crude rate (unstable) for post-neonatal (1 month to 1 year) infants is 0.6 which is lower than the NYS rate excl. NYC 1.5. *Source: NYS Community Health Indicator Reports Dashboard, Accessed Oct. 28th, 2025.*

The Warren County three-year mortality crude rate (unstable) for fetal deaths (20 weeks of gestation or more) is 5.7 which is similar to the NYS rate excl. NYC 6.0. *Source: NYS Community Health Indicator Reports Dashboard, Accessed Oct. 28th, 2025.*

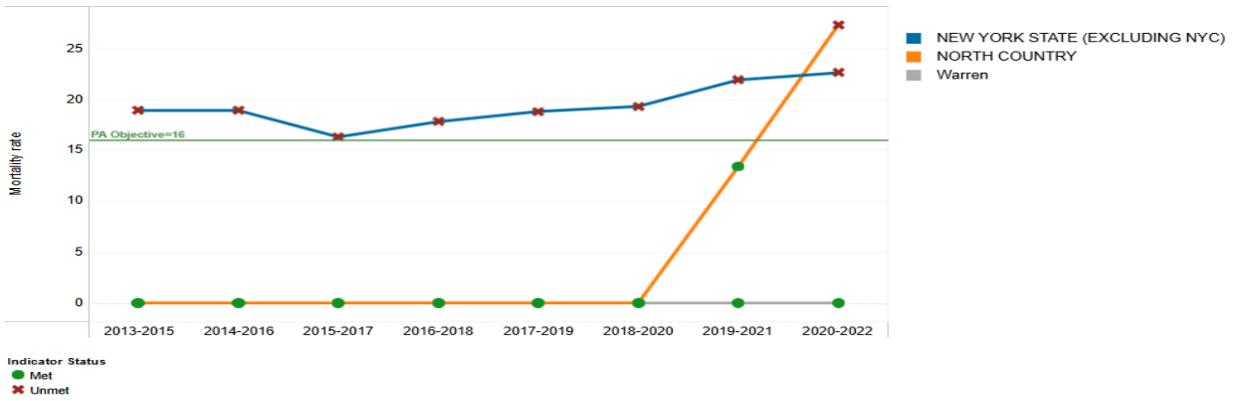

The Warren County three-year mortality crude rate (unstable) for perinatal (20 weeks gestation - <28 days of life) spontaneous fetal deaths is 10.2 which is higher than the NYS rate excl. NYC 8.7. *Source: NYS Community Health Indicator Reports Dashboard, Accessed Oct. 28th, 2025.*

The Warren County three-year mortality crude rate for perinatal (28 weeks gestation - <7 days of life) spontaneous fetal deaths is 7.0 which is higher than the NYS rate excl. NYC 4.7. *Source: NYS Community Health Indicator Reports Dashboard, Accessed Oct. 28th, 2025.*

Fertility Rates (including teen rates)

Fertility rates refer to the number of births in Warren County. Pregnancy rates refer to a woman of any age that becomes pregnant in Warren County.

Although Warren County has seen rates of teen fertility and pregnancy fluctuate somewhat over the last ten years, the trend has seen declining rates for both.

Warren County has a three-year fertility crude rate of 48.7 per 1,000 females aged 15-44. This rate is lower than the NYS rate excl. NYC of 53.3. Fertility rates are a key factor to population growth, stability and change. *Source: NYS Community Health Indicator Reports Dashboard, Accessed Oct. 28th, 2025.*

The teen fertility crude rate per 1,000 (births to mothers aged 15-19/female population aged 15-19 years) in Warren County is 10.2 which is slightly higher than the NYS rate excl. NYC at 9. *Source: NYS Community Health Indicator Reports Dashboard, Accessed Oct. 28th, 2025.*

When broken out further the teen fertility crude rate per 1,000 (births to mothers aged 18-19/female population aged 18-19 years) in Warren County is 23.1 which is higher than the NYS rate excl. NYC 16.5. *Source: NYS Community Health Indicator Reports Dashboard, Accessed Oct. 28th, 2025.*

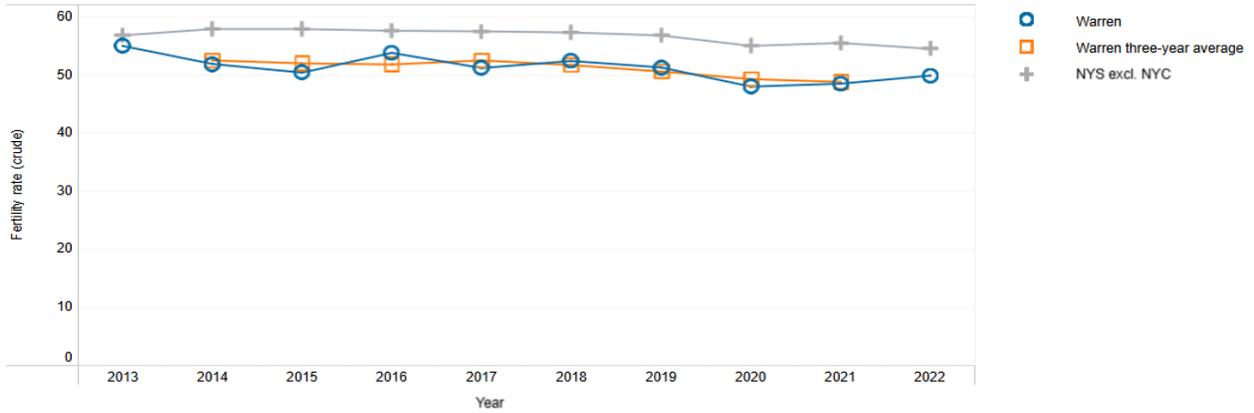

The three-year percentage of births to teens aged 15-19 in Warren County is 3.2% which is similar to the NYS rate excl. NYC of 2.6%. *Source: NYS Community Health Indicator Reports Dashboard, Accessed Oct. 28th, 2025.*

In Warren County the three-year percentage of births delivered by cesarean section is 34.9% which is similar to NYS rate excl. NYC 33.8%. The rate of low-risk births by cesarean section in Warren County is 29.3% which is the same as the NYS rate excl. NYC 29.3%. Cesarean births can be used to save the life of a mother and a baby if complications arise during labor. However, C-section births do have several risks that should be considered before being utilized especially for low-risk births Risks include infection, bleeding, damage to organs and possibly complications with future pregnancies. *Source: NYS Community Health Indicator Reports Dashboard, Accessed Oct. 28th, 2025.*

Prenatal Care

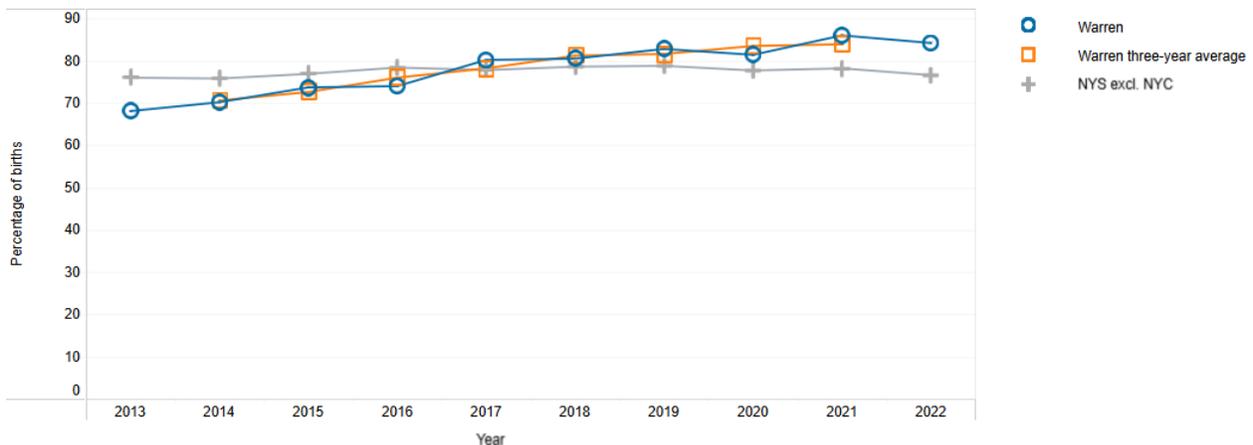

Adequate and timely prenatal care can provide many benefits to a mother and child. Prenatal care can reduce the risk of pre-term births and potentially detect and treat health problems during pregnancy. Prenatal care also provides the expectant mother with education, resources and tools to help ensure a healthy pregnancy and birth.

In Warren County the three-year average percentage of births to women with adequate prenatal care is 85.0% which is higher than the NYS rate excl. NYC 74.6%. The Warren County rate has trended upward from 2015-2021. *Source: NYS Community Health Indicator Reports Dashboard, Accessed Oct. 28th, 2025.*

Childhood Lead

According to the New York State Department of Health, studies show that no amount of lead exposure is safe for children. Lead is a heavy metal that can harm children when introduced to the body. Lead can harm a young child's growth, behavior, and ability to learn. It can also cause anemia, kidney damage, and hearing loss.

Children younger than six years old are more likely to experience lead poisoning than any other age group. Most often, children get lead poisoning from breathing in or swallowing dust from old lead paint. Common sources of lead include floors, windowsills, hands, and toys.

Lead Screening

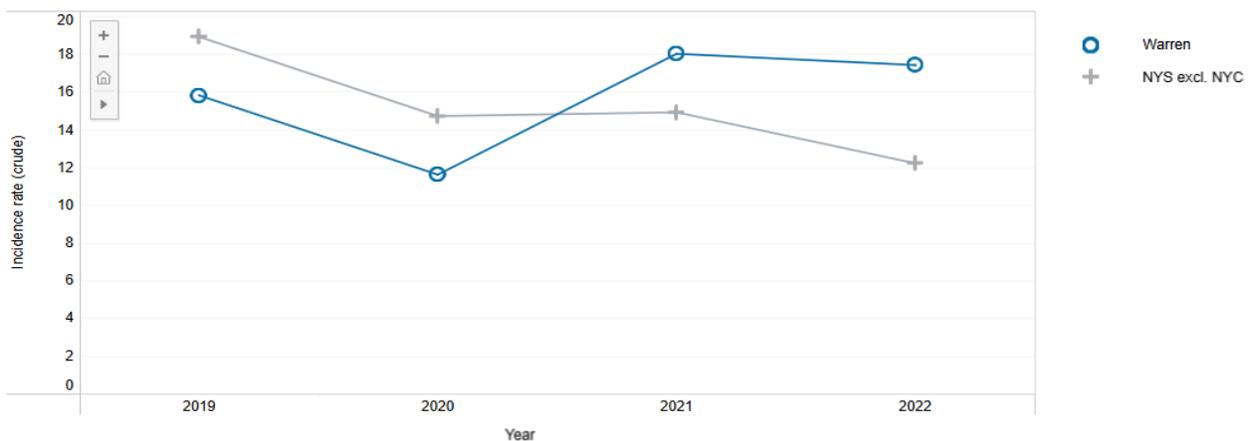

In 2023 75% of infants (9 months <18 months) were screened for lead exposure. This rate is higher than the NYS rate of 58.2%. The lead screening rate of children two years old (18 months - <36 months) was 76% which is higher than the NYS rate of 55.78%. *Source: NYS Medicaid and Lead Registry Data, Accessed Nov. 3rd, 2025.*

High Lead Levels

In Warren County the incidence of confirmed high blood lead levels (5 micrograms or higher per deciliter) in tested children <72 months is 17.4 per 1,000 which is higher than the NYS rate excl. NYC 9.5. The rate has fallen and risen from 2019-2022. *Source: NYS Community Health Indicator Reports Dashboard, Accessed Nov. 3rd, 2025.*

The three-year incidence rate of confirmed high blood lead levels (10 micrograms or higher per deciliter) in tested children in Warren County is 5.1 per 1,000 which is higher than the NYS rate excl. NYC 3.1. The rate in Warren County had been declining from 2014-2019 but started to increase 2019-21. *Source: NYS Community Health Indicator Reports Dashboard, Accessed Nov. 3rd, 2025.*

Communicable Disease

Immunization Rates

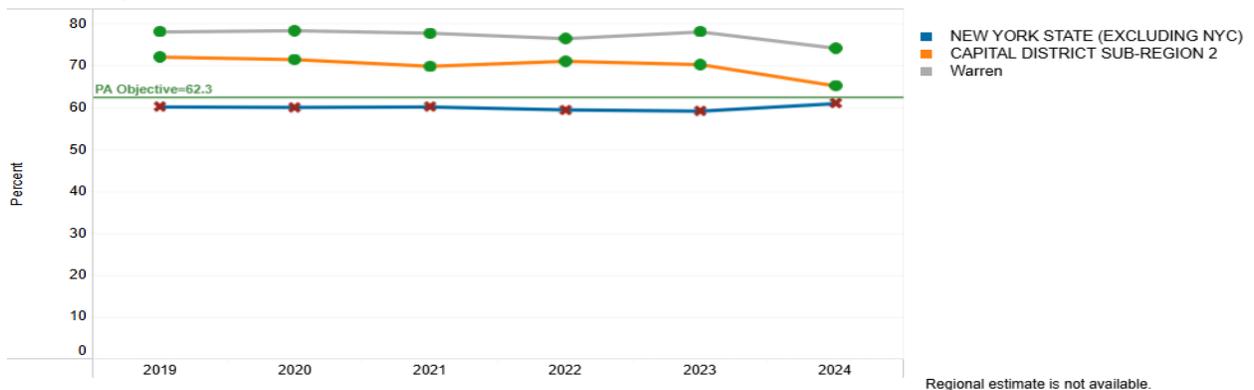

One of the best ways to protect against communicable disease is through vaccination. The higher the vaccination rate of a population, the lower the likelihood of a communicable disease moving through that population. Childhood vaccinations are a key part of communicable disease prevention.

In Warren County the percentage of children 24-35 months old that have completed the 4:3:1:3:3:1:4 immunization series is 74.1% which is higher than the North Country rate 65.1% and the NYS rate excl. NYC 60.1%. The Warren County rate is also better than the NYS Prevention Agenda benchmark of 62.3%.
Source: NYS Prevention Agenda Dashboard, Accessed Dec. 18th, 2025

The age adjusted percentage of fee for service Medicare enrollees that receive an annual flu vaccination in Warren County has remained stable from 2012-2021 at 50% which is the same as the NYS rate.
Source: NYS Community Health Indicator Reports Dashboard, Accessed Nov. 3rd, 2025.

Additionally, the percentage of adults aged 65 years and older that have received a pneumococcal vaccine is 72.7% which is higher than the NYS rate of 65.6%.

HIV/AIDS

The age adjusted rates for newly diagnosed HIV cases in Warren County is so low it does not meet the reporting criteria and is unstable. Also, the age-adjusted three-year average AIDS mortality rate in Warren County is unstable and reported as zero in 2021. *Source: NYS Community Health Indicator Reports Dashboard, Accessed Nov. 5th, 2025.*

Health Behavior Risk Factors

Health behavior risk factors are modifiable behaviors that increase the likelihood of developing a disease or health problem. Key examples include tobacco use, poor nutrition, physical inactivity, and excessive alcohol consumption. These behaviors are linked to a higher risk of chronic diseases like heart disease, stroke, cancer, and type 2 diabetes.

Most of the data that is used to determine the rates of specific health behaviors is self-reported through the Expanded Behavioral Risk Factor Surveillance System Survey. For details about the EBRFSS please visit <https://www.health.ny.gov/statistics/brfss/expanded/>

Physical Inactivity

In Warren County 76.3% of adults reported participating in leisure-time physical activity. Warren County's rate is higher than the North Country rate 73.3% and similar to the NYS rate excl. NYC 75.7%. Warren County's rate is lower than the NYS Prevention Agenda Objective 77.4%.

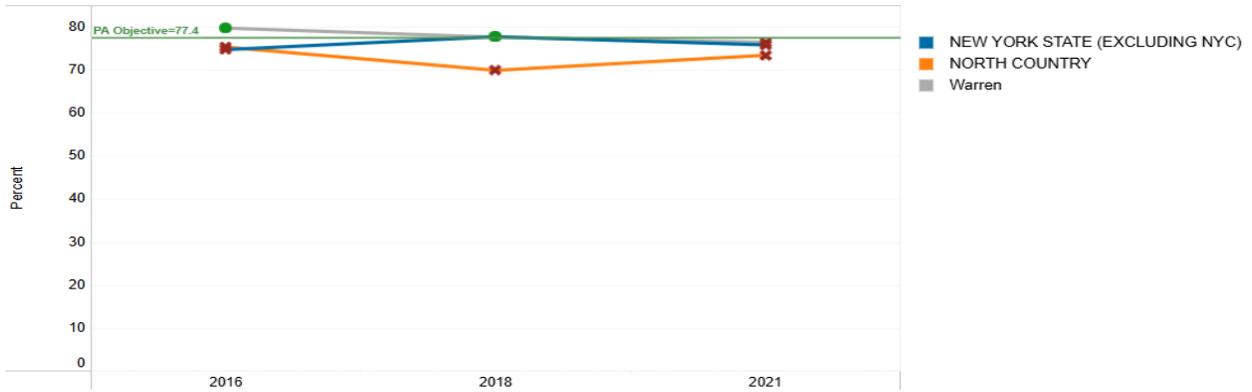

The rate of adults 65+ years reporting leisure-time physical activity in Warren County is 68.4% which is slightly higher than the North Country 66.0% and the same as NYS rate excl. NYC 68.5%. The Warren County rate is lower than the NYS Prevention Agenda objective 75.4%. *Source: Prevention Agenda Tracking Dashboard, Accessed November 13th, 2025.*

Opportunities for leisure-time physical activity for people with disabilities can be limited in many communities. In Warren County the percentage of people with disabilities that participate in leisure-time physical activity is 58.7%. However, due to a low number of respondents the Warren County rate is unstable. The North Country rate is 60.4% and the NYS rate excl. NYC is 58.7%. The NYS Prevention Agenda Objective is 61.8%. *Source: Prevention Agenda Tracking Dashboard, Accessed November 13th, 2025.*

Tobacco Use

Tobacco Use remains a leading cause of preventable morbidity and mortality. The current rate of adult smokers in Warren County is 21.3% which is higher than the North Country rate 19.7% and the NYS rate excl. NYC 13.2%. Warren County’s adult smoking rate is also higher than the Prevention Agenda objective 11%. Warren County has seen it’s adult smoking rates fluctuate from 2016-2021. *Source: Prevention Agenda tracking dashboard, Accessed November 13th, 2025.*

In Warren County the data for adult smokers with an income less than \$25,000 is unstable due to a low number of respondents. The percentage of Warren County adult smokers with an income less than \$25,000 is 24.1% (unstable) which is lower than the North Country 28.7% and NYS excl. NYC 26.5%. The Warren County rate is higher than the Prevention Agenda objective 15.3%. *Source: Prevention Agenda tracking dashboard, Accessed November 13th, 2025.*

Preventive Health Screenings

Besides preventive cancer screenings, other health screenings for risk factors such as hypertension (high blood pressure) and diabetes can reduce the impacts of chronic disease. These types of screenings can also reduce the risk of heart attack, stroke, kidney disease, nerve and eye damage through the use of medications and therapeutic life-style changes.

In Warren County the percentage of adults age 45+ who had a test for high blood sugar or diabetes within the last three years was 69.9% which is higher than the North Country rate 62.8% and the NYS rate excl. NYC 63.8%. Warren County's rate is lower than the NYS Prevention Agenda objective 71.7%. *Source: Prevention Agenda tracking dashboard, Accessed November 14th, 2025.*

No data exists for the percentage of Warren County residents that have been screened for hypertension. However, data does exist for Warren County residents with physician diagnosed hypertension that currently manage their blood pressure using medication. In Warren County the percentage of adults with diagnosed high blood pressure currently taking medication to manage their high blood pressure is 72.4%. Warren County's rate is lower than the North Country rate 79.4% and the NYS rate excl. NYC 81.2%. Warren County's rate is lower than the NYS Prevention Agenda objective 80.7%. *Source: Prevention Agenda tracking dashboard, Accessed November 14th, 2025.*

Chronic Disease Self-Management

Individuals with chronic disease can experience disease related complications that can lead to preventable hospitalizations. Taking a chronic disease self-management course can provide education to the person to better manage their chronic disease and reduce the risk for complications.

In Warren County the percentage of adults with a chronic disease (asthma, CVD, diabetes, CKD, cancer) who have taken a course or class to learn how to manage their condition is 9.8%. Warren County's rate is the same as the North Country rate 9.9%, but lower than the NYS rate excl. NYC 11.3%. Warren County's rate is lower than the NYS Prevention Agenda objective 10.6%. *Source: Prevention Agenda tracking dashboard, Accessed November 14th, 2025.*

Health Challenges in Warren County

To identify the health challenges facing Warren County residents, multiple sources of information were reviewed. Feedback surveys from the public and key stakeholders provided valuable information from the people directly impacted by and/or working to address the health challenges found in Warren County. Additional information from the County Health Rankings and Roadmaps 2025 (see Appendix D) was also reviewed.

There is consensus from key stakeholders and the public that health challenges exist for mental health across a life span. Substance misuse and abuse was also cited by both groups as a considerable health challenge in Warren County. Chronic disease also remains a challenge in Warren County.

Risk Factors Contributing to Health Challenges in Warren County

The health challenges facing Warren County are not the result of a single risk factor, but from the intersection of numerous risk factors. Identifying which risk factors contribute the most to creating these health challenges can help focus limited resources towards reducing their negative impacts on health in Warren County.

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

There was a lot of agreement from stakeholders and the public about the risk factors most responsible for the health challenges faced by Warren County residents. Poverty and other socio-economic factors were identified as the leading contributors to the health challenges in Warren County. Socio-economic factors including stable employment, housing affordability and stability, food insecurity and healthcare access were identified as having the greatest health impacts.

Childcare costs in Warren County are very high. According to the County Health Rankings and Roadmaps 2025 Survey the average household in Warren County spends 41% of its income on childcare for two children. Money spent on childcare is not available to purchase healthy food or pay for healthcare.

The increase in food costs are likely impacting health in Warren County. As food costs for healthy options like fruits, vegetables and whole grains increase families often turn to cheaper, highly processed, calorie dense, and low in nutrients foods to meet their needs³². Consuming highly processed food can contribute to many chronic diseases including obesity, diabetes and cardiovascular disease.

Affordable stable housing is a serious challenge in Warren County. Almost half (47%) of the renters in Warren County are paying more than 30% of their income on rent alone. The median sales price of homes has increased 33% since 2019 according to a housing study conducted by the Warren County Planning Department. Key stakeholders and the public agree that housing costs and instability need to be addressed to improve health outcomes.

Warren County has limited infrastructure to support public transportation. Outside of the Glens Falls/Queensbury population centers bus routes and other forms of transit often do not exist or exist on a seasonal basis. Taxi services are limited, and ride-share services are often expensive and not always available especially in more rural areas of Warren County. The lack of public transportation limits a person's ability to access routine medical care, healthy food options, childcare, employment, and opportunities for physical activity. Residents in Warren County rely heavily on personal cars to get to their destination.

In addition to poverty and the socio-economic risk factors there are other risk factors that also contribute to the health challenges in Warren County. Behavioral risk factors such as high rates of tobacco use, and high rates of binge drinking continue to negatively impact health in Warren County.

Chronic disease continues to be a health challenge in Warren County. Warren County's population has continued to age. Currently 1 in 4 residents of Warren County are 65+ years old. As the average age of Warren County's population continues to rise the chronic disease burden is likely to rise. Additional planning considerations will also be needed to ensure community supports are in place to care for an aging population.

As more tele-health services come online, having access to reliable broadband internet is crucial for individuals seeking care when transportation, poor weather or provider shortages exist. There are communities in Warren County located within the Adirondack Park with limited broadband access because of excessive regulations and limited infrastructure. According to the County Health Rankings and Roadmaps 2025 Survey, 89% of Warren County residents have access to broadband internet. Individuals living in communities with low rates of broadband internet may miss out on the health benefits of being connected, mainly access to telehealth services and health information.

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

Health Disparities

Health disparities are preventable differences in the burden of disease, injury, violence, or opportunities to achieve optimal health that exist between different population groups. These differences are closely linked to social, economic, and environmental disadvantages, and include disparities in health outcomes, access to healthcare, and the quality of care received. Factors contributing to health disparities can include race, ethnicity, gender, age, socioeconomic status, disability, sexual orientation, and geographic location.

Warren County has a relatively homogenous population with 91% of the population identifying as white non-Hispanic. The lack of racial and ethnic diversity makes it difficult to determine how individuals in minority populations experience health disparities in Warren County. The lack of available data should not dismiss the likelihood that minority populations that live, work, worship and play in Warren County experience similar health disparities as minority populations throughout New York.

Additionally, Warren County is a small to mid-sized county in terms of population which makes identifying health disparities by zip code or census tract difficult because of a lack of data at a granular level.

Socio-economic risk factors are likely the largest contributor to health disparities in Warren County. Stable and reliable data for low-income groups remains hard to find at the County level. It is estimated that 1 in 10 people in Warren County live below the poverty line. The number children living below the poverty line is even higher at 15% according to the County Health Rankings and Roadmaps 2025 Survey. Approximately 20% of the population is covered by Medicaid according to the US Census Bureau ACS 5-year Estimate and about 5% of the population < 65 years old are uninsured. The percentage of people who reported not receiving healthcare due to costs is about 4%.

Nearly, 12% of Warren County residents did not have access to a reliable food source during the past year. Also, just over 10% of households relied on SNAP/food stamp benefits in the past year to supplement their food needs and 39% of school-aged children qualify for free/reduced lunch according to the *NYS CHIRS Data dashboard Accessed Nov. 20th, 2025*.

Warren County residents that pay rent for housing have seen the median gross rent rise by 21% from 2016 to 2022. It is estimated that 48% of renters in Warren County pay 30% or more of their income to cover gross rent. Source: *NYS CHIRS Data Dashboard Accessed Nov. 20th, 2025*.

In Warren County approximately 16% of the population has a disability. People with disabilities have often been forgotten when considering health disparities. Health disparities in this population are often caused by societal and health system barriers such as inadequate healthcare provider training, inaccessible facilities, financial hurdles, and a lack of adapted health promotion programs, rather than the disability itself.

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

Community Assets and Resources

Adirondack Health Institute

- **Adirondack Rural Health Network (ARHN)**
Provides a forum for public health leaders, community health centers, hospitals, behavioral health organizations, emergency medical services, and other community-based organizations to assess regional population health needs and develop collaborative responses to priorities. As a multi-stakeholder regional coalition, ARHN informs on planning assessment, provides education and training to further the New York State Department of Health (NYSDOH) Prevention Agenda, and offers other resources that support the development of the regional health care system. <https://ahihealth.org/program/adirondack-rural-health-network-arhn/> for more information.
- **Commercial Tobacco Use Reduction Network (C-TURN)**
An advancing tobacco-free communities partnership grant funded by the New York State Department of Health Bureau of Tobacco Control and serves Warren, Washington, and Saratoga Counties. C-TURN seeks to build healthier communities through tobacco-free living. Visit <https://www.cvfamilycenter.org/team-categories/tobacco-free> for more information.
- **Community Health Access to Addiction and Mental Healthcare Project (CHAMP)**
A joint statewide program of the New York State Office of Mental Health, Office of Addiction Services and Supports, and other partners, is designed to help individuals and their families access needed substance use disorder and mental health treatment services and get the most from their health insurance benefits. CHAMP services are available to everyone, regardless of insurance coverage, including the uninsured. <https://ahihealth.org/program/community-health-access-to-addiction-and-mental-healthcare-project-champ/> for more information.
- **Enrollment Assistance Services and Education (EASE)**
This program assists individuals and families with enrolling in health insurance coverage through the NY State of Health Marketplace. <https://ahihealth.org/program/enrollment-assistance-services-and-education-ease/> for more information.
- **Health Home and Care Management**
AHI is a New York State-Designated lead Health Home and serves all ages. A Health Home is not a place; it is a care management service that connects their members to the community, social supports, and health care. Through the Health Home program, AHI ensures all pillars of support involved with caring for our members collaborate with the overall goal of improving health and wellness. <https://ahihealth.org/program/ahi-health-home-care-management/> for more information.

Glens Falls Hospital

- **Building Healthy Communities/Health Promotion Center**
 - **Cancer Prevention in Action (CPiA)** – through funding from Health Research, Inc. and New York State, works to increase awareness about the effects of ultraviolet (UV) exposure as well as human papillomavirus (HPV) within Warren, Washington, and Saratoga Counties.
 - **Health Systems for a Tobacco Free New York** – in partnership with the North Country Healthy Heart Network, works collaboratively with health care systems to develop and

An accredited by the American College of Surgeons as a Community Hospital Comprehensive Cancer Program. Nationally accredited and locally focused that offers a comprehensive program of cancer care services from treatments and innovative education and support programs to early detection and cancer prevention. <https://www.albanymed.org/glensfalls/c-r-wood-cancer-center-at-glens-falls-hospital/> for more information.

Hudson Headwaters Health Network (HHHN)

HHHN is a nonprofit system of 26 community health centers providing primary care to more than 7,900 square miles of the Adirondack North Country and Glens Falls region. A Federally Qualified Health Center (FQHC), Hudson Headwaters' mission is to provide care to everyone in the communities they serve, regardless of income or insurance.

- **Primary care, Urgent care, Pediatric care, Women's Health, Clinical Pharmacy Services, Dentistry**
- **Children's School-based Dental Program** – Healthy Smiles provides expanded access to preventive dental services and oral health education to children throughout the North Country. The dental team travels to area schools with their portable equipment twice each year and performs dental screenings, cleanings, sealant applications and fluoride treatments for students in grades Pre-K through 12. All services are offered at no out-of-pocket cost.
- **Behavioral Health** – HHHN offers mental health counseling, medication assessment and medication prescribing for primary care adult and pediatric patients
- **Care Management Program** – assist individuals living with chronic conditions and/or health-related social needs to meet their health care goals.
- **Diabetes Education and Nutrition Counseling** – offers nutrition services with Registered Dietitians and Certified Diabetes educators that are available to primary care patients at all

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

health center locations, either in person or virtually. They also offer classes throughout the year with a range of topics that would benefit children, adolescents, pregnant women and adults who may be interested in improving their nutrition.

- **Hepatitis C Program** – offers free and confidential rapid Hepatitis C testing, connection to specialty care and focused care management services.
- **PACE at HHHN** - The Program of All-Inclusive Care for the Elderly (PACE) is a community-based program that provides coordinated medical and social services to eligible older adults who want to continue living in their own home despite chronic care needs.
- **Ryan White Program** – federal funded grant program offers testing, primary care, support and assistance for people and families living with HIV/AIDS.
- **Homeward Bound** – offers home-based primary care for patients with chronic and serious illnesses who have a difficult time leaving the house.

Warren County Departments

- **Warren and Hamilton Counties Office for the Aging** – Serves the over age 60 population, assisting them to access services and address their needs. This includes services that help them remain independent, prevent premature institutionalization, relieve isolation and loneliness, and improve their quality of life and health. <https://www.warrencountyny.gov/ofa> for more information and list of services.
- **Warren County Health Services** – Provides education, resources, and services to promote physical and mental health and prevent disease, injury, and disability. Services include WIC, Child Find Program, Early Intervention Program, Preschool Program for Children with Disabilities, Health Education Program, Lead Poisoning Prevention Program, Emergency Response Planning, Communicable Disease Control Program, Immunization Program, and Certified Home Health Care services. <https://www.warrencountyny.gov/healthservices> for more information and list of services.
- **Social Services** – Provides temporary assistance, Supplemental Nutrition Assistance Program (SNAP), Home Energy Assistance Program (HEAP), Medicaid, Child Care, Child Support Collection and Enforcement, Adult Protective Services, Child Protective Services, Prevention Services, Foster Care and Adoption, and more. <https://www.warrencountyny.gov/socservold> for more information.
- **Planning and Community Development** – analyzes, prioritizes, and plans for the balanced and sustainable use of the county’s natural resources and built environment to enhance the quality of life for current and future generations while respecting our past. Provides general planning, community development, Geographic Information System (GIS), and other services. <https://www.warrencountyny.gov/planning> for more information.
- **Parks, Recreation & Railroad** – oversees numerous parks, boat launches, trails, and other recreational sites around Warren County. <https://www.warrencountyny.gov/parksandrec> for more information.
- **Department of Workforce Development** – to educate, empower and collaborate with the community to navigate today’s employment landscape by offering resources, programs, workshops and guidance to overcome barriers and connect with local employers for in-demand jobs.

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

- **Warren County Economic Development Corporation (EDC)** – is a private not-for-profit organization that has a contract with Warren County to provide services to support existing companies through technical and regulatory assistance and act as a liaison between business and government; assist local companies seeking regulatory, financial, and technical assistance from local, state and federal agencies; marketing the region to attract new business to Warren County; offer site selection to interested business, sponsor workshops and seminars; and more.
- **Office of Community Services (Mental Health) for Warren and Washington Counties** – responsible for planning, oversight, and coordination of a wide range of services for individuals and families impacted by mental illness, intellectual/developmental, and addiction issues. <https://www.warrencountyny.gov/mhcs> for more information and list of services.

Mental Wellbeing and Substance Use

- **Council for Prevention** – Provides many programs and services to the schools and communities at large to prevent and help those in recovery. Provides suicide prevention, school-based programs, teen programs, a challenge program, court outing program, gambling services, Hope & Healing Recovery Center, and more. <https://councilforprevention.org/> for more information.
- **Baywood Center** – a rehabilitative center that offers various services for individuals struggling with addiction. These services include alcohol rehab, dual diagnosis, opioid addiction, adult program, men’s rehab, women’s rehab, young adult rehab, outpatient rehab, aftercare support, family therapy, group therapy, and individual therapy.
- **Behavioral Health Services North (BHSN)** – a not-for-profit organization committed to strengthening individuals, families, and community life by delivering a behavioral health care and human service system that provides an integrated continuum of essential, responsive, and cost-effective services. Provides mental health services, addiction recovery, social services, residential services, care management, and youth services. <https://bhsn.org/> for more information and list of services.
- **Addictions Care Center of Albany (ACCA)** – Serves the community, strengthens lives and improves futures through comprehensive residential and outpatient treatment of substance use disorders. Provides residential services, outpatient services, and prevention services. Has two locations in Warren County.
- **Northern Rivers** – Empowers children, adults, and families to change their lives and build stronger relationships. Services include permanency resource center, behavioral health and crisis response services, coordinated care and community solutions, education, foster care services, residential services, and more. <https://www.northernrivers.org/> for more information and list of services.
- **PEOPLE USA** – a peer-run mental health non-profit that creates, provides, and promotes its own innovative crisis response, and wellness services. Warren/Washington County programs include a Peer Forensic Diversion Team that works directly with law enforcement and court system seeking alternatives to incarceration, to provide immediate crisis response, and/or transitional care services to people at risk of entering the criminal justice system due to unaddressed mental health, addiction, or social determinants of health issues; Rose house is a 24/7/365 short-term crisis respite that is a home-like alternative to hospital and psychiatric ERs and inpatient units; and Transition of Care services at the Rose House provide people with the

Community Health Improvement Plan

The purpose of a Community Health Improvement Plan is to provide a framework for communities to use to address their high health priorities. Through a collaborative planning process with community partners four main community health priority areas were identified in Warren County based on information from the Community Health Assessment. The priorities identified in this most recent CHIP are very similar to previously identified CHIP priorities and center around mental health and substance use and economic wellbeing.

The following health priority areas were identified in Warren County

- Housing stability & affordability
- Primary prevention, substance misuse, and overdose prevention
- Anxiety & stress
- Childhood behavioral health

Prioritization Method

The planning process for the Warren County Community Health Improvement Plan 2026-2030 began in 2023 with Warren County participating in the Adirondack Rural Health Network (ARHN) Community Health Assessment Planning group. The ARHN CHA planning group consists of seven local health departments including Warren County Public Health and five hospitals.

The purpose of the planning group is to support ongoing health planning and assessment by working collaboratively on intervention strategies and developing the planning documents required by the New York State Department of Health and the Internal Revenue Service.

In addition to being an active member of the regional CHA planning committee Warren County Public Health began assembling a local Community Health Improvement Planning Committee in January of 2025. Staff from Warren County Public Health sent out invitations to a total of 18 organizations and other county departments asking them to participate in an introductory presentation about the CHIP planning process. Following the presentation, a survey was sent out asking the organizations in attendance if they would actively participate in the CHIP planning process. A positive response was returned from 15 of the 18 organizations.

Once the planning committee was established, a series of four virtual planning meetings were held bi-monthly in February, April, June and August. The February meeting focused on explaining in detail the Community Health Improvement Planning process and the requirements set by the New York State Department of Health for a successful plan submission by December 2025. In addition to the plan requirements demographic data for Warren County was also presented to the group for review.

Subsequent virtual meetings focused on reviewing numerous data sources. The committee considered data from a regional stakeholder survey, community feedback survey and over 300 health indicators from sources including the NYS Prevention Agenda, NYS County Health Indicator Reports, Behavioral Risk Factor Surveillance (BRFFS), Institute for Traffic Safety Management and Research, Department of Corrections, USDA and many others. Committee members were able to ask for clarification of data,

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

consider data points for further review and look for trends in the data. All the data sets that were reviewed were sent electronically to all committee members after each meeting.

Between virtual meetings CHIP committee members were asked to complete a survey using Google Forms to establish the criteria that would guide the priority selection process. The survey contained nine potential criteria options and committee members were asked to select their top four. The criteria chosen were as follows:

1. Feasibility of affecting the issue
2. Resources needed to address the issue adequately (do they exist, can they be found etc.)
3. The community's perception of the issue's importance
4. The cost of the issue to the community – in dollars, time spent addressing it, social costs

Honorable Mention – Seriousness of the issue

Beginning in September of 2025 meetings were held monthly and switched to an in-person format. At the September meeting committee members were tasked with identifying at least three priority areas from the list of 24 predetermined priorities provided by the New York State Department of Health.

Each committee member received a binder containing all of the data that had been shared in previous meetings. Committee members were given 5 voting dots that would be used for priority selection. All 24 possible priorities were hung on the wall organized by domain using large poster size paper.

Prior to casting their votes committee members were allowed time (about 30 minutes) to make their case to the group about why they felt specific priorities should be chosen as the most important. Once the discussion was complete committee members were instructed not to discuss the priorities while voting was in progress to limit unnecessary pressure to vote for a specific priority.

Committee members were then provided instructions about how voting for the priorities of their choice would occur. Each committee member was required to vote for at least three separate priorities. Once they had voted for three priorities committee members were allowed to cast their remaining two votes anyway they wished. All remaining votes could be placed on a previously selected priority, the votes could be split among previously chosen priorities or they could be used for a new priority selection.

Once voting was concluded preliminary results were tabulated. To accommodate committee members that were unable to attend the in-person meeting an online priority voting form was created and sent out via email. Voting instructions were also sent in the email along with the priority selection criteria established by the committee. Online voting was open for 10 days to allow enough time for absent committee members to ask questions and complete the voting process.

Once online voting closed Warren County Public Health staff added the online votes to the existing votes from the in-person results. The results of the voting identified 4 priority areas

1. Primary prevention, substance misuse and overdose prevention – 11 votes
2. Anxiety & Stress – 9 votes
3. Childhood Behavioral Health – 9 votes
4. Housing Stability & Affordability – 9 votes

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

The purpose of the October meeting was to set objectives using examples from NYSDOH as guidance, for the priority areas selected in the previous meeting. Committee members were asked to present potential evidence-based interventions that could be implemented to address the priority areas and objectives agreed upon by the committee.

Due to numerous unexpected last-minute conflicts many committee members were unable to attend the October meeting. The small group of committee members in attendance did conduct an in-depth discussion about potential objectives and set preliminary objectives for review by committee members unable to attend. Additionally, the committee members in attendance agreed that requesting potential interventions by email would be acceptable.

An email was drafted and sent in early November to committee members that were not able to attend the October meeting. Committee members were provided instructions for reviewing the preliminary objectives for approval or modifications. The email also provided directions for sharing potential interventions that could be implemented to meet the planning objectives. Committee members were given 18 days to send their ideas and suggestions to the committee members for review.

Other Identified Health Needs

Additional health needs were identified during the CHIP planning process. Chronic disease remains an area of concern in Warren County due to an aging population. Cancer, cardiovascular disease, and health behaviors that contribute to chronic disease development (e.g. tobacco use) will continue to be addressed at current levels. However, due to limited resources and the New York State Department of Health's stronger emphasis on addressing social determinants of health CHIP Committee members felt that tackling social determinants of health could also have positive impacts on chronic disease.

Other health areas will continue to be addressed and monitored at current levels in Warren County including communicable disease, maternal/child health, immunizations, and other NYSDOH General Public Health Work Program requirements. Warren County is a partial service County and lacks the capabilities and staffing of full-service County Health Departments and must rely on State partners for assistance.

Addressing Health Priority Areas

Evidence shows that social determinants of health are strongly associated with health outcomes. However, addressing health priority areas focusing on SDOH from a public health prospective is difficult. Although it is clear that many non-medical factors influence an individual's health it is not clear how public health should integrate itself into addressing many of these problems.

Although admirable, addressing housing, education, income, transportation, social cohesion, etcetera to improve health outcomes through a public health approach is a tall order. Clearly, public health needs to be part of the discussions and can provide valuable insight about how these larger system issues impact the health of individuals. However, if the people working in these larger social systems do not see the health impacts created by them as a priority it is unlikely they will incorporate many of the strategies suggested by public health to strengthen those systems. Funding, staffing levels, buy-in from leadership and competing priorities will all directly impact how much progress can be made.

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

The following health priority tables offer a summary of the goals, objectives and interventions the committee members have suggested for addressing the agreed upon health priority areas.

Priority: Housing Stability & Affordability			
Objective 1: Increase the percentage of adults, with an annual income of less than \$25,000, who were able to pay their mortgage, rent, or utility bills in the past 12 months.			
Intervention	Population Focus	Family of Measures	Public Health Role
Create a technical assistance program that can coordinate access to state/federal aid for housing programs. Assist in administering grant programs with local municipalities to increase housing availability/supply. Enhance communication between County departments to ensure citizens in need are directed to the appropriate resource	Low socio-economic individuals and families	Establish technical assistance toolkit. Track the number of local partnerships between county and local municipalities. Track the number of citizens referred for housing questions to the appropriate department	Assist with coordination of communication.
Priority: Housing Stability & Affordability			
Objective 2: Increase the number of people living in HUD-subsidized housing from 1821 to 2000 (data accessed from the Office of the NYS Comptroller website on Dec. 2 nd , 2025			
Intervention	Population Focus	Family of Measures	Public Health Role
Attract landlords to section 8 housing choice voucher program: develop an incentive program (damage deposits, hold fees, one-time grants, low interest repair loans)	Low socio-economic individuals and families	How many landlords utilize the section 8 choice voucher program	Limited
Priority: Housing Stability & Affordability			
Objective 3: Reduce the percentage of renter occupied units in which gross rent is 30% or more of household income.			
Intervention	Population Focus	Family of Measures	Public Health Role
Incentivize development of new workforce housing using various methods (possibly: tax incentives, low income	Seasonal and general workforce.	Adoption of new tax incentive programs, Number of LIHTC applications, Number of long-term rental units renovated	Limited

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

housing tax credits, Lake Champlain – Lake George Regional Planning Board Workforce Housing Revolving Loan fund to renovate long-term rental stock for the region's year-round workforce)			
Priority: Housing Stability & Affordability			
Objective 4: Reduce the percentage of renter occupied units in which gross rent is 30% or more of household income from 47% to 42.3%.			
Intervention	Population Focus	Family of Measures	Public Health Role
Provide density bonuses or fast track zoning changes for fully affordable and or workforce housing projects	Low socio-economic individuals and families	How many zoning changes occur or how many bonuses are issued for workforce housing projects	Limited
Priority: Housing Stability & Affordability			
Objective 5: Increase the supply of affordable housing options throughout Warren County			
Intervention	Population Focus	Family of Measures	Public Health Role
Establish the Warren County Housing Alliance to work with developers, non-profits, and foundations familiar with the market to develop additional affordable housing opportunities, both rental and homeownership	Low socio-economic individuals and families	Establish the Alliance and hold an initial meeting to set up the Alliance structure and mission statement	Limited

Priority: Primary Prevention, Substance Misuse, and Overdose Prevention			
Objective 1: Increase the number of unique individuals enrolled in OASAS treatment programs, who reported any opioid as the primary substance at admission from 490.9 to 500.9			
Intervention	Population Focus	Family of Measures	Public Health Role
SBIRT Expansion: Work with local EMS, schools, and primary care practices to expand Screening, Brief Intervention, and	Ages 16+	Document the number of agencies that adopt the SBIRT program	Program promotion

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

Referral to Treatment across Warren County			
Priority: Primary Prevention, Substance Misuse, and Overdose Prevention			
Objective 2: Reduce the crude rate of overdose deaths involving drugs, per 100,000 population, from 18.3 to 17.3.			
Intervention	Population Focus	Family of Measures	Public Health Role
Post-Overdose Engagement Outreach: Establish a "Bridge to Care" outreach team that follows-up with individuals within 72 hours of a nonfatal overdose to provide linkage to treatment and harm-reduction services.	All Ages	Establishment of the team and the number of individuals followed-up with after a nonfatal overdose	Recruitment and referral
Priority: Primary Prevention, Substance Misuse, and Overdose Prevention			
Objective 3: Increase the crude rate of patients per 100,000 population who received at least one buprenorphine prescription for opioid use disorder from 1107.4 to 1218.4.			
Intervention	Population Focus	Family of Measures	Public Health Role
Expand access to FDA approved medications used to treat opioid use disorder in primary care and other specialty care organizations.	All ages	Increase the number of primary care and specialty care locations offering MAT.	MAT promotion and encouragement for adoption
Priority: Primary Prevention, Substance Misuse, and Overdose Prevention			
Objective 4: Decrease the rate of newborns with neonatal withdrawal syndrome and/or affected by maternal use of opioids or other substances (any diagnosis) per 1,000 newborn discharges from 27.0 to 24.3.			
Intervention	Population Focus	Family of Measures	Public Health Role
Expand access to FDA approved medications used to treat opioid use disorder in primary care and other specialty care organizations.	All ages	Increase the number of primary care and specialty care locations offering MAT.	MAT promotion and encouragement for adoption

Priority: Anxiety & Stress			
Objective 1: Decrease the percentage of adults who experience frequent mental distress from 19.2% to 17.2%.			
Intervention	Population Focus	Family of Measures	Public Health Role

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.
 *Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

Use the CarePath program https://mhanys.org/carepath/ a non-clinical model to support people/families over the age of 12 in improving their mind-body health and enjoy a sense of wellbeing - Anyone in the community can become CarePath Coaches.	All Ages	Increase the number of CarePath coaches and the number of people able to access CarePath programs	Promote adoption of the program
-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	----------	---------------------------------------------------------------------------------------------------	---------------------------------

Priority: Anxiety & Stress

Objective 2: Reduce the percentage of adults with a major depressive episode during the past year from 6.7% to 5.7%.

Intervention	Population Focus	Family of Measures	Public Health Role
Increase awareness and access to counseling services and community trainings (e.g. Caleo Counseling - provide therapy and medication evaluation and management if necessary, in a warm and professional atmosphere. Services are available for children, adolescents, adults, and families living in Warren, Washington and Northern Saratoga Counties. Sliding scale fee program or Open Access Services uses a walk-in model for anyone of any age and is seeking immediate intervention+D13)	All ages	Increase the number of people that utilize walk-in services. Increase the number of community trainings provided	Promotion and possibly community program facilitation.

Priority: Anxiety & Stress

Objective 3: Decrease the percentage of adults who experience frequent mental distress from 19.2% to 18.0%.

Intervention	Population Focus	Family of Measures	Public Health Role
Provide free Community Resilience Workshops throughout Warren County providing information and education about stress management, emotional well-being and self-resilience.	All Ages	How many workshops are provided and how many people attend.	Promotion and possibly facilitation

Priority: Childhood Behavioral Health

Objective 1: Increase the percent of children aged 0-5 years who are reported by their parent as exhibiting all 4 flourishing criteria from 72.2% to 79.4%.

Intervention	Population Focus	Family of Measures	Public Health Role
--------------	------------------	--------------------	--------------------

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

Work more supportively and collaboratively together with those serving children and families in the community, like HeadStart, to learn more about identification, intervention, and referrals, along with possibly services provided in house at these entities to make it easier for connectivity.	Families with young children	Number of organizations that work with children and families that receive educational training on identifying, interventions, referrals to services available.	Provide referrals to appropriate services
Priority: Childhood Behavioral Health			
Objective 1A: Increase the percent of children aged 0-5 years who are reported by their parent as exhibiting all 4 flourishing criteria from 72.2% to 79.4%.			
Intervention	Population Focus	Family of Measures	Public Health Role
Expand access to Parenting & Early Childhood Supports through evidence-based parent coaching programs (e.g. Triple P or Incredible Years) for families with children 0-8 years old	Families with young children	Track the number of individuals that complete the coaching courses. Increase the number of programs offered in the community.	Limited – Promotion of coaching courses
Priority: Childhood Behavioral Health			
Objective 2: Reduce the rate of self-inflicted hospitalizations in 15-19 years old per 10,000 from 20.2 to 18.0			
Intervention	Population Focus	Family of Measures	Public Health Role
Increase community/school trainings for youth mental health and suicide prevention (e.g. teen mental health first aid, preventing suicide in our community)	Teens/Youth	Number of trainings offered and completed. Number of attendees	Program Promotion

Tracking Progress

Successful implementation of the CHIP will require regular progress check-ins from community partners and other participating agencies. It is anticipated that quarterly progress meetings will be used to track progress and discuss any potential changes that might be required to help the CHIP meet its goals and objectives.

Since Warren County Public Health is not the lead agency for most of the interventions described in the CHIP there will be a reliance on community partners to track and report how the interventions are progressing. Warren County Public Health will facilitate the quarterly check-ins and maintain email communications with all participating organizations. Public health staff will also participate in any intervention activities when feasible.

Should an organization working on a specific intervention report back that something has changed (e.g. grant funding issues, staffing issues, change in priority) Warren County Public Health will request information from the organization if intends to continue with the intervention. If the organization will

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.
 *Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

continue with the intervention any changes in approach or expected outcomes will be requested to be reported. If the organization no longer intends to pursue a specific intervention it will be removed from the workplan unless or until another organization decides to take on the specific intervention.

Community Notification

The Warren County CHA/CHIP will be shared with the Warren County Board of Supervisors during the regularly monthly Board of Supervisor's public meeting in early 2026. Hardcopies of the executive summary will be provided to each Supervisor during the meeting and additional copies will be available to the public at the same meeting. Following its presentation to the Board the CHA/CHIP will be posted to the Warren County homepage and on the Warren County Public Health website.

To reach a broader audience the availability of the CHA/CHIP document will be posted on the Warren County social media pages and included in the Warren Count newsletter. Community members that would like a hardcopy of the CHA/CHIP can request one free of charge by contacting the Warren County Public Health department.

The CHA/CHIP report is posted on the following webpages:

<https://www.warrencountyny.gov/healthservices> - Public Health Website

<https://www.warrencountyny.gov/> - County Website

<https://www.facebook.com/warrencountyny/> - Facebook

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

2025 Data Methodology

Background:

The Community Health Assessment (CHA) Committee, facilitated by the Adirondack Rural Health Network (ARHN), a program of Adirondack Health Institute (AHI), is a multi-county, regional stakeholder group, that convenes to support ongoing health planning and assessment by working collaboratively on interventions, and developing the planning documents required by the New York State Department of Health (NYS DOH) and the Internal Revenue Service (IRS) to advance the New York State Prevention Agenda.

The overarching goal of collecting and providing this data to the CHA Committee is to provide a comprehensive picture of individual counties as well as an overview of population health within the ARHN region, as well as Montgomery and Saratoga counties. The ARHN region is comprised of Clinton, Essex, Franklin, Fulton, Hamilton, Warren, and Washington counties.

When available, Upstate New York (NY) data is provided as a benchmark statistic. Upstate NY is calculated as the NYS total minus New York City (NYC), which includes New York, Kings, Bronx, Richmond, and Queens counties.

Demographic Profile:

Demographic data was primarily taken from the United States Census Bureau 2023 American Consumer Survey 5-year estimates. Additional sources include: 2020 Census Estimate: Census Quick Stats, and United States Department of Agriculture (USDA) Farm Service Agency (FSA) Crop Acreage Data Reported to FSA. Information included in the demographic profile includes square mileage, population, family status, poverty, immigrant status, housing, vehicle accessibility education, and employment status/sector.

Health System Profile:

The Health System Profile data includes hospital, nursing home, and adult care facilities, bed counts, physician data, and licensure data. Data on facilities is sourced from the NYS Department of Health, NYS Health Profiles, covering profiles for hospitals, nursing homes, and adult care facilities. Licensure data is pulled from the NYS Education Department (NYSED).

Education Profile:

The Education Profile is separated into two parts: 1) Education System Information and 2) School Districts by County.

- 1) The Education System Profile includes student enrollment, student to teacher ratios, English proficiency rates, free lunch eligibility rates, as well as high school graduate statistics. Data was sourced from the NYSED and the National Center for Education Statistics (NCES).

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

- 2) The Education System Profiles by School District identifies all the school districts in each county, sourced from the National Center for Education Statistics (NCES).

Asset Limited, Income Constrained, Employed (ALICE) Profile:

ALICE profile data includes total households, ALICE households over 65 years, ALICE households by race/ethnicity, poverty/ALICE percentages within each county, unemployment rates, percent of residents with health insurance, and median household income. All ALICE data is reflective of data presented in the ALICE profile originated from the 2024 ALICE report (www.unitedforalice.org/new-york). Within the ALICE report, data was pulled from the 2022 American Community Survey, 2022 ALICE Threshold and ALICE county demographics.

County Health Rankings (CHR) Profile:

The County Health Rankings profile includes indicators from the 2025 CHR release, with focuses on Population Health and Well-Being and Community Conditions. The population health and well-being section focuses on length of life and quality of life indicators. The community conditions section focuses on health infrastructure, physical environment, and social and economic factors.

The County Health Rankings identifies the two focus areas as:

- **Population health and well-being** is something we create as a society, not something an individual can attain in a clinic or be responsible for alone. Health is more than being free from disease and pain; health is the ability to thrive. Well-being covers both quality of life and the ability of people and communities to contribute to the world. Population health involves optimal physical, mental, spiritual and social well-being.
- **Community conditions** include the social and economic factors, physical environment and health infrastructure in which people are born, live, learn, work, play, worship and age. Community conditions are also referred to as the social determinants of health.

**All data included in the writing analysis relating to the County Health Rankings section is pulled from the website directly and does not reflect analysis completed by ARHN. Strengths and areas for improvement are identified by County Health Rankings.*

Data Dashboard:

The Data Dashboard, compiled of 355 data indicators, provides an overview of population health as compared to the ARHN region, Upstate New York region, Prevention Agenda Benchmark and/or NYS.

Each source file has visualization aspects to better depict data, as well as a deep dive tab that provides a table with a benchmark comparison, color-coded to identify where the county rate falls in comparison.

The Data Dashboard is composed of 10 sources, each with their own overview and deep dive tab.

Data and statistics for all indicators come from a variety of sources, including:

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

- Prevention Agenda Dashboard (PA) – 65 indicators
- Community Health Indicator Reports (CHIRs) – 204 indicators
- NYS Behavioral Risk Factor Surveillance System (BRFSS) Health Indicators – 45 indicators
- Division of Criminal Justice Services Index, Property, and Firearm Rates (DCJS) – 3 indicators
- NYS Traffic Safety Statistical Repository (ITSMR) – 6 indicators
- Student Weight Status Category Reporting System (SWSCRS) Data – 8 indicators
- US Department of Agriculture (USDA) Food Atlas – 2 indicators
- NYS Department of Health Tobacco Enforcement Compliance Results (Tobacco) – 4 indicators
- NYS Department of Health Maternal and Child Health (MCH) – 15 indicators
- Department of Health, Wadsworth Center (Wadsworth) – 3 indicators

ARHN Region Calculations:

The ARHN region includes Clinton, Essex, Franklin, Fulton, Hamilton, Warren, and Washington Counties.

- For percentages, formula is $[\text{sum all numerators}/\text{sum of all denominators}] * 100$.
- For rates per 100,000, formula is $[(\text{sum all numerators}/\text{sum of all denominators}) * 100000]$
- For rates per 10,000, formula is $[(\text{sum all numerators}/\text{sum of all denominators}) * 10000]$
- For rates per 1000, formula is $[\text{sum all numerators}/\text{sum of all denominators}] * 1000]$

** For ratio of rates, differences in rates, and indicators that include 3 or more ARHN counties as unstable/unavailable/suppressed, ARHN rates/percentages are unable to be calculated.*

UPSTATE Calculations:

Upstate NY includes all counties in NYS counties except for the five boroughs of NYC: Kings, Queens, New York, Richmond, and Bronx counties.

- For percentages, formula is $[(\mathbf{A}) * 100]$
- For rates per 100,000, formula is $[(\mathbf{A}) * 100000]$
- For rates per 10,000, formula is $[(\mathbf{A}) * 10000]$
- For rates per 1000, formula is $[(\mathbf{A}) * 1000]$

For all data sources, the information under a. identifies **A**.

1. PA

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

- a. The NYS Prevention Agenda Dashboard provides a New York State (excluding NYC) region.
2. CHIRs
 - a. A NYS (excluding NYC) region is provided for some indicators. For indicators without a NYS (excluding NYC) measure, calculations were provided (using the methodology above) when data was available.
 3. BRFSS
 - a. A NYS exclusive of NYC region is available for some indicators. For indicators without a NYS Exclusive of NYC region, calculations were provided (using the methodology above) when data was available.
 4. MCH
 - a. The NYS Maternal-Child Health Dashboard provides a New York State (excluding NYC) measure.
 5. SWSCRS
 - a. The Student Weight Status Category Reporting System features a Statewide (Excluding NYC) region.
 6. For Wadsworth, DCJS, ITSMR, USDA, and Tobacco data sources, upstate rates were calculated using the calculation below:

$$\left[\frac{\text{Total numerator for NYS} - \text{Total numerator for NYC}}{\text{Total denominator for NYS} - \text{Total denominator for NYC}} \right] \times \text{Specific Rate}$$

**NYS totals are either provided by the source or computer incorporating all the counties within NYS.*

**NYC totals include the five NYC boroughs: Bronx, Kings, New York, Queens, and Richmond counties.*

**Specific rate multiplier depends on the indicator (i.e. rate per 100,000, rate per 10,000, or rate per 1,000).*

All rates in the ARHN region and Upstate NY (where not provided by the data source) are calculated (unless data is not available for calculations).

Unstable Estimates:

Due to limitations in the PowerBI software, all unstable estimates are identified in a column of each data sources deep dive or data compilation table. For further information on what

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

quantifies the indicator as unstable, please see below for explanations (provided by each data source) or visit the data source website for more information.

Prevention Agenda Dashboard

- Multiple years of data were combined to generate more stable estimates when the number of events for an indicator was small (i.e., rare conditions).
The relative standard error (RSE) is a tool for assessing reliability of an estimate. A large RSE is produced when estimates are calculated based on a small number of cases.² Estimates with large RSEs are considered less reliable than estimates with small RSEs. The [National Center for Health Statistics](#) recommends that estimates with RSEs greater than 30% should be considered unreliable/unstable.³
- The RSE is calculated by dividing the standard error of the estimate by the estimate itself, then multiplying that result by 100. The RSE is expressed as a percentage of the estimate.
- For the Prevention Agenda dashboard, an asterisk (*) or plus (+) symbol is used to indicate that a percentage, rate, or ratio is unreliable/unstable. This usually occurs when there are less than 10 events in the numerator (RSE is greater than 30%).

Data Suppression for Confidentiality

Results are not shown (i.e., suppressed) when issues of confidentiality exist. Suppression rules vary depending on the data source and the indicator.

Table 1. Summary of data suppression and statistical evaluation significance for the Prevention Agenda Indicators by data source

Data Sources	Suppression Criteria	Statistical Significance Techniques
Sample Surveys		
Pregnancy Risk Assessment Monitoring System	Denominator <30	95% CI comparison
BRFSS and Expanded BRFSS	Numerator <6 or Denominator <50	95% CI comparison
US Census		90% CI comparison
National Survey on Drug Use and Health		95% CI comparison
Youth Risk Behavior Surveillance System	Denominator <100	95% CI comparison
Youth Tobacco Survey		95% CI comparison
Population Count Data		

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

Death	Single Year: Denominator population <50; Three-Year Combined: Denominator population <30	Rate/percentage: one sided chi-square test with p-value <0.05 Rate difference: one sided 95% CI comparison
Birth	Single Year: Denominator total Births <50	One sided chi-square test with p-value <0.05
Sexually Transmitted Infection (STI) Surveillance		One sided chi-square test with p-value <0.05
HIV Surveillance	Numerator 1-2 cases	County level (rate): one sided 95% CI comparison; State level (rate): one sided chi-square test with p-value <0.05
SPARCS	Numerator between 1 - 5 cases	Rate/percentage: one sided chi-square test with p-value <0.05; Ratio/Rate difference: one sided 95% CI comparison
Prescription Monitoring Program (PMP) Registry	Numerator between 1 - 5 cases	One sided chi-square test with p-value <0.05

CI: Confidence Interval

BRFSS: Behavioral Risk Factor Surveillance System

SPARCS: Statewide Planning and Research Cooperative System

Community Health Indicator Reports (CHIRs)

- Multiple years of data were combined to generate more stable estimates when the number of events for an indicator was small (i.e., rare conditions). The relative standard error (RSE) is a tool for assessing reliability of an estimate. A large RSE is produced when estimates are calculated based on a small number of cases.² Estimates with large RSEs are considered less reliable than estimates with small RSEs. The [National Center for Health Statistics](#) recommends that estimates with RSEs greater than 30% should be considered unreliable/unstable.³
- The RSE is calculated by dividing the standard error of the estimate by the estimate itself, then multiplying that result by 100. The RSE is expressed as a percent of the estimate.

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

- For notation purposes, an asterisk (*) symbol is used to indicate that a percentage, rate, or ratio is unreliable/unstable. This usually occurs when there are less than 10 events in the numerator (RSE is greater than 30%).

Data Suppression Rules for Confidentiality

Results are not shown (i.e., suppressed) when issues of confidentiality exist. Suppression rules vary depending on the data source and the indicator. An 's' notation indicates that the data did not meet reporting criteria.

Table 1. Summary of Data Suppression Rules

Data Sources	Suppression Criteria
Bureau of Dental Health (BDH)	Margin of error >20% or Denominator <50
Behavioral Risk Factor Surveillance System (BRFSS) and Expanded BRFSS	Denominator <50 or Numerator < 10
Vital Statistics - Death Records	Denominator population <30
Statewide Perinatal Data System (SPDS) - birth records	Denominator population/births <30
AIDS/HIV	Numerator 1-2 cases
Statewide Planning and Research Cooperative System (SPARCS) - ED and hospital records	Numerator 1-5 cases
Office of Quality and Patient Safety (QARR and eQARR)	Denominator <30 and Numerator >0 cases
Cancer Registry	Numerator 1 - 15 cases
Sexually Transmitted Disease Surveillance System	Annual population less than 1,000 and secondary suppression
NYS Pregnancy Nutrition Surveillance System (PNSS) - WIC Program	Denominator <100

NYS Behavioral Risk Factor Surveillance System (BRFSS) Health Indicators

Limitations of Use:

- Data are sample based and therefore subject to sampling variability. The sampling variability for each indicator is highlighted by including the 95% confidence interval.

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

- Data are based on respondents' answers to a telephone survey, so data are self-reported and therefore potentially subject to response bias, recall bias, social desirability bias, and other limitations associated with self-report. Great effort is undertaken when administering the BRFSS to mitigate or minimize the risk of such biases, but they cannot be eliminated altogether.
- Indicator estimates are sometimes based on small samples, resulting in low precision of the estimates. If the eBRFSS or BRFSS sample has less than 10 respondents with the condition measured by the health indicator or less than 50 respondents at risk for the health condition, the crude and age-adjusted rates are suppressed. The suppression is noted in the "Notes" field.
- Some crude/age-adjusted rates that meet this requirement may still be estimated but with high variability. Highly variable rates are defined as having confidence limits greater than $\pm 10\%$.
- These highly variable rates are flagged as being unreliable in the "Notes" section. In addition, the age-adjustment process may generate rates that are suspect, due to small (three or fewer observations) age-adjustment cells. The age-adjusted rates with which there are concerns are identified in the "Notes" field. Age-adjusted rates are not calculated for indicators that apply to a specific age-group (e.g., adults 50 to 75 years of age). The indicators with an age-restriction are identified in the "Notes" field.

Division of Criminal Justice Services Index, Property, and Firearm Rates

Limitations of Data Use:

- Although crime reports are collected from more than 500 NYS police and sheriffs' departments, this data set is limited to the crimes reported to the police agencies but not the total crimes that occurred.
- Requests for additional information, missing data or actual copies of the crime reports should be directed to DCJS or the local submitting police agency.

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

- Public access to this crime data is intended solely to allow the public convenient and immediate access to public information. While all attempts are made to provide accurate, current and reliable information, the Division of Criminal Justice Services recognizes the possibility of human and/or mechanical error and that information captured at a point in time may change over time

NYS Traffic Safety Statistical Repository (TSSR)

- ITSMR provides data on police-reported fatal and personal injury crashes and select tickets issued by law enforcement agency via our PTS Data Form. These data include numbers of crashes submitted to the DMV that were “reportable,” meaning a motor vehicle crash reported by a police officer or a motorist, in which there was a fatality, a person injured, and/or property damage of more than \$1,000 to the vehicle of one person. Crashes that occurred in parking lots or on private property are excluded. The ticket counts include only those tickets issued by the police agency and submitted to the DMV.
- In the TSSR ITSMR also provides Crash Data by County and Municipality and Ticket Data by County and Municipality. The crash data here include reportable crashes that occurred within the municipality, regardless of the agency that submitted the crash reports. The ticket data here include the municipality where the tickets were issued, regardless of the agency that submitted the tickets. In the TSSR report County Traffic Tickets — Select Violations by Enforcement Agency, tables show TSLED tickets issued by enforcement agency and submitted to the DMV.
- Tickets submitted to the DMV after DMV has given ITSMR the okay to finalize the ticket data for a calendar year will not appear in that year’s totals

Student Weight Status Category Reporting System (SWSCRS) Data

Limitations of Data:

- Because of restrictions in reporting due to the FERPA there was variation in how much of the student population was represented in the data school districts submitted, especially among smaller school districts. Therefore, the percentage of the student population represented in the county and regional level estimates may vary. This limits researchers’ ability to draw absolute conclusions about observed differences in student weight status among counties and regions.
- Because school district boundaries do not align with county or regional boundaries, the county and regional-level estimates reflect data from students attending school within districts assigned a particular county or regional-code. County/regional assignment is not based on county or region of residence. The Page 3 of 3 county and regional-level estimates represent the percentage of students within a weight status category reported to the Student Weight Status Category Reporting System.

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

- These data should not be considered to represent all school aged-children attending school in that county or region because of: restrictions in reporting due to FERPA, parents/guardians' ability to request that their child's weight status data be excluded from reporting, and other sources of missing data.

US Department of Agriculture (USDA) Food Atlas

The current version of the Food Environment Atlas has more than 280 variables, including new indicators on food banks and nutrition assistance program participation rates. All of the data included in the Atlas are aggregated into an Excel spreadsheet for easy download. These data come from a variety of sources and cover varying years and geographic levels. The documentation for each version of the data provides complete information on definitions and data sources.

In the downloadable Excel spreadsheets:

- State and county Federal information processing standards (FIPS) codes are provided.
- The variable lookup file links the short field descriptions (indicator names) used in the data file with the longer indicator names used in the Atlas.
- Unless otherwise noted with asterisks on the longer indicator names (in the variable lookup file), indicators are county-level measures. A single asterisk * denotes a State-level indicator, while a double asterisk ** denotes a regional-level indicator.
- "No data" fields are empty or referenced with "-9999".
- Supplemental data are provided in additional tabs (State- and county-level data are provided separately).

NYS Department of Health Tobacco Enforcement Compliance Results

Limitations of Use:

- County health departments and the New York City Department of Consumer Affairs may provide this information on their own websites. These websites and the data on them may be updated more frequently. More detailed information may be obtained directly from these partner agencies or DOH through the Freedom of Information Law (FOIL) process. The FOIL process for DOH can be found on its website, for other agencies' FOIL process please contact them directly.
- Enforcement data reflects information that was gathered during an inspection, and confirmed through official enforcement action. There may be a significant delay between the date of an inspection and the date that a violation is confirmed through enforcement action. Accordingly, enforcement data included in a certain measurement period may actually reflect violations that occurred in a previous measurement period.

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

- As previously stated, the data in Health Data NY maps, data lists, and data tables is updated annually. Requests for data pertaining to more recent inspections, or requests for more detailed information or copies of individual inspection reports should be directed to the individual county health department, New York City Department of Consumer Affairs, or State District Office which conducted the inspection or inspections in question.

NYS Department of Health Maternal and Child Health

Unstable Estimates:

- Multiple years of data were combined to generate more stable estimates when the number of events for an indicator was small (i.e., rare conditions). The relative standard error (RSE) is a tool for assessing reliability of an estimate. A large RSE is produced when estimates are calculated based on a small number of cases.¹ Estimates with large RSEs are considered less reliable than estimates with small RSEs. The [National Center for Health Statistics](#) recommends that estimates with RSEs greater than 30% should be considered unreliable/unstable.²
- The RSE is calculated by dividing the standard error of the estimate by the estimate itself, then multiplying that result by 100. The RSE is expressed as a percent of the estimate.
- For the Maternal and Child Health dashboard, an asterisk (*) symbol is used to indicate that a percentage or rate is unreliable/unstable. This usually occurs when there are fewer than 10 events in the numerator (RSE is greater than 30%).

Data Suppression for Confidentiality

Results are not shown (i.e., suppressed) when issues of confidentiality exist. Suppression rules vary depending on the data source and the indicator.

Table 1. Summary of data suppression and statistical evaluation significance for the Maternal and Child Health Indicators by data source

Data Sources	Suppression Criteria	Statistical Significance Techniques
Sample Surveys		
BRFSS (NYS)	Unweighted numerator <6 or Unweighted denominator <50	95% CI comparison
BRFSS (CDC)	Unweighted denominator <30	95% CI comparison
NSCH	Unweighted denominator <30	95% CI comparison
YRBSS	Unweighted denominator < 100	95% CI comparison

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

NYS PRAMS	Unweighted denominator < 30	95% CI comparison
Population Count Data		
NYS VS	Denominator population or event <30	Rate/percentage: one sided chi-square test with p-value <0.05
NYS SPARCS	Numerator between 1 - 5 cases	Rate/percentage: one sided chi-square test with p-value <0.05
HCUP-SID	Numerator <=10	Rate/percentage: one sided chi-square test with p-value <0.05
NVSS	Numerator <10	Rate/percentage: one sided chi-square test with p-value <0.05
Special Supplemental Nutrition Program for WIC	Indicator has a denominator <50	Rate/percentage: one sided chi-square test with p-value <0.05

included in the annual report

(<https://www.wadsworth.org/programs/id/rabies/reports>).

- The data does not describe why the animal was tested. The most common reason to request rabies testing is due to human exposure. However, because rabies has a 99.9% fatality rate, the laboratory often receives samples from animals with neurological illness to rule out rabies before additional tests are performed. For example, the laboratory receives exotic animals with neurological illnesses from zoological settings for rabies testing. If these animals test negative for rabies, additional post-mortem tests can be completed to determine the cause of illness without the risk of exposing multiple people or testing facilities to rabies. The data is not necessarily representative of rabies in wild populations. The data may be biased, since a greater number of sick animals are submitted for testing, as opposed to healthy animals randomly chosen from the wild population.

2025 STAKEHOLDER SURVEY REPORT

Adirondack Rural Health Network Area

Clinton, Essex, Franklin, Fulton, Hamilton,
Warren, and Washington Counties

The Adirondack Rural Health Network (ARHN) is a program of AHI-Adirondack Health Institute, supported by the New York State Department of Health, Office of Health Systems Management, Division of Health Facility Planning, Charles D. Cook Office of Rural Health.

2025

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

BACKGROUND INFORMATION:

Adirondack Rural Health Network:

The Adirondack Rural Health Network (ARHN) is a program of Adirondack Health Institute, Inc. (AHI), a 501c3 not-for-profit organization. ARHN is the longest-running program of AHI, established in 1987 through a New York State Department of Health (NYS DOH) Rural Health Network Development Grant. ARHN is a multi-stakeholder, regional coalition that informs planning and assessment, provides education and training to further the implementation of the NYS DOH Health Prevention Agenda, and offers other resources that support the development of the regional health care system. Since its inception, ARHN has provided a forum to assess regional population health needs and develop collaborative responses to priorities. ARHN includes organizations from Clinton, Essex, Franklin, Fulton, Hamilton, Warren, and Washington counties.

Description of the Community Health Assessment Committee:

Since 2002, ARHN has been recognized as the leading sponsor of formal community health planning throughout the region. The Community Health Assessment (CHA) Committee, facilitated by ARHN, is a multi-county, regional stakeholder group consisting of hospitals and local county health departments that convenes to develop and support sophisticated process for ongoing community health planning and assessment and planning for the defined region to address identified regional priorities. The CHA Committee is made up of representatives from the following organizations:

- Adirondack Health
- Clinton County Health Department
- University of Vermont Health Network - Alice Hyde Medical Center
- University of Vermont Health Network - Elizabethtown Community Hospital
- Essex County Health Department
- Franklin County Public Health
- Fulton County Public Health
- Glens Falls Hospital
- Hamilton County Public Health and Nursing Services
- Nathan Littauer Hospital
- University of Vermont Health Network – Champlain Valley Physicians Hospital
- Warren County Health Services
- Washington County Public Health.

The purpose of the CHA Committee is to address regional priorities, identify interventions, and develop the planning documents required by NYS DOH and the Internal Revenue Service (IRS) in an effort to advance the New York State Prevention Agenda.

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

CHA Data Sub-Committee:

The Data Sub-Committee (DSC) is a subset of CHA partners that meet regularly to review the tools and processes used by CHA Committee members to develop their Community Health Assessments (CHAs) and Community Health Needs Assessments (CHNAs), as well as their Community Health Improvement Plans (CHIPs) and Community Service Plans (CSPs). The DSC also works to identify opportunities to strengthen the CHA/CHNA/CHIP/CSP process. One of the primary activities of the DSC was to collaboratively develop a stakeholder survey.

The DSC met nine times from January 2024 through January 2025. Meetings were held via Webex. Attendance ranged from 6 to 11 subcommittee members per meeting. Meetings were facilitated by AHI staff from ARHN and attended by members of the AHI Data and Analytics team.

SURVEY METHODOLOGY:

Survey Creation:

The 2025 CHA Stakeholder Survey was updated by the DSC, with the definitive version incorporating additional questions and information related to Social Determinants of Health (SDOH), aligning with the priorities of the 2025-2030 NYS Prevention Agenda.

Survey Facilitation:

ARHN facilitated the release of the stakeholder survey across its seven-county service area to gather input on regional health care needs and priorities for the CHA Committee. Survey participants included professionals from health care, social services, education, and government, as well as community members. The ARHN region comprises Clinton, Essex, Franklin, Fulton, Hamilton, Warren, and Washington Counties.

Survey Logistics:

The survey was developed through SurveyMonkey and included 14 community health questions along with several demographic questions. The CHA Committee compiled a county level list of health care, social service, education, government, and service providers (hereafter referred to as community stakeholders) to receive the survey. In total, 889 community stakeholders were identified for distribution.

In early February 2025, CHA Committee partners sent an initial email to community stakeholders introducing the survey and providing a web-based link. ARHN followed up with several reminder emails to stakeholders who had not completed the survey. Additionally, CHA

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

Committee members were provided with the names of all non-respondents for additional follow-up, at partner discretion.

The survey requested that community stakeholders rank the five domains of SDOH based on their impact within their communities and identify key priority areas addressed by their organizations. Respondents also provided insight into what they viewed as the top health concerns in their communities and the most influential contributing factors. A full list of survey questions can be found under Appendix A.

Survey Responses and Analysis:

A total of 307 responses were received through March 14, 2025, resulting in a response rate of 34.5%. Respondents were asked to indicate the counties in which they provide services and were able to select multiple counties, as appropriate. County specific response totals are outlined in the “By County” section.

Analysis is organized both alphabetically and in the order of which questions appeared on the survey to support easier comprehension. Each table is clearly labeled to indicate whether the data is presented as response counts or percentages. For tables involving county data, color coding is used to differentiate counties. Written analysis accompanies each section and present findings are in percentages.

This report provides a regional overview of the results, focusing on the ARHN service area. It provides individual analyses of Clinton, Essex, Franklin, Fulton, Hamilton, Warren, and Washington counties. The stakeholder survey aimed to collect insights from diverse sectors and perspectives to inform our understanding of community needs. These findings will guide strategic planning across the Adirondack region, benefiting partners who serve individual counties, and those whose footprint covers multiple counties.

ANALYSIS:

Q3. Job Title/Role

Approximately 50.83% of respondents identified themselves as *Administrator or Director*, making it the most common selection. The second most frequent response was the “*Other*” category, accounting for 31.56% of responses. Among those who selected “*Other*,” common roles included *President, Nurse and Purse Practitioner, School Nurse, Town Supervisors, or other county-level roles*.

It is important to note that based on responses indicated their roles did not fit the available options. To improve future surveys, it is recommended to expand the list of job titles to better capture the range of positions held by stakeholders

Respondent Job Titles		
Job Title	Responses	
	Count	Percentage
Community Member	5	1.66%
Direct Service Staff	22	7.31%
Program/Project Manager	26	8.64%
Administrator/Director	153	50.83%
Other	95	31.56%

Q5. Indicate the one community sector that best describes your organization/agency:

Community stakeholders were asked to identify one community sector that best described their organization or agency. Respondents represented a diverse range of services, with the most frequently selected sectors being *Education (27.09%)*, which includes both K-12 and College/Universities, followed by *Health Care Provider (12.04%)*, *Local Government (11.04%)*, and *Other (10.70%)*.

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

Among those who selected “*Other*,” most listed roles could have fit into one of the defined sectors. To improve clarity in future surveys, it is recommended to refine sector definitions or offer clarifying examples to help respondents accurately categorize their roles.

Community Sector	1-25	25-50	50-75	75-100
College/University	2 (0.67%)			
Disability Services	5 (1.67%)			
Early Childhood	7 (2.34%)			
Economic Development	2 (0.67%)			
Employment/Job Training	3 (1.00%)			
Food/Nutrition	8 (2.68%)			
Foundation/Philanthropy	1 (0.33%)			
Health Based CBO	7 (2.34%)			
Health Care Provider		36 (12.04%)		
Housing	3 (1.00%)			
Law Enforcement/Corrections	11 (3.68%)			
Local Government (e.g., elected official, zoning/planning board)		33 (11.04%)		
Media	1 (0.33%)			
Mental, Emotional, Behavioral Health Provider	15 (5.02%)			
Other		32 (10.70%)		
Public Health	23 (7.69%)			
Recreation	3 (1.00%)			
School (K-12)				79 (26.42%)
Seniors/Aging Services	10 (3.34%)			
Social Services	15 (5.02%)			
Transportation	3 (1.00%)			

Q6. Indicate the region/counties your organization/agency serves:

Respondents were asked to indicate which county or counties their organization or agency serves. Over 93% of responses (285 total) were from Clinton, Essex, and Washington counties. Approximately 28.5% of respondents reported serving counties outside the seven ARHN counties, including Montgomery and Saratoga counties. In addition, 22% of respondents identified themselves as serving the entirety of the Adirondack/North Country region. It should be noted that the figures below exceed 100%, as many organizations serve multiple counties.

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

Respondents by County		
County	Count	Percentage
Adirondack/North Country Region	68	22.30%
Clinton	78	25.57%
Essex	118	38.68%
Franklin	70	22.95%
Fulton	52	17.05%
Hamilton	46	15.08%
Montgomery	30	9.84%
Saratoga	39	12.79%
Warren	65	21.31%
Washington	89	29.18%
Other (please specify)	18	5.90%

*Figures do not add up to 100% due to multiple counties per organization

Respondents in the *Other* column identified a variety of counties outside the region, including St. Lawrence (6), Schenectady (4), Albany (3), Rensselaer (3), Jefferson (3), Schoharie (3), Herkimer (2), Vermont (2), and Herkimer (2).

Q7. What are the top five health concerns affecting the residents of the counties your organization/agency serves?

Community stakeholders were asked to identify what they believed to be the top five health concerns affecting residents in the counties their organization or agency serves. Respondents ranked their selections from one, the highest health concern, to five, indicating the lowest health concern.

According to the survey results, the top five health concerns affecting the residents within the ARHN region were *Mental Health (22.83%)*, *Substance Use/Alcoholism/Opioid Use (11.59%)*, *Child/Adolescent emotional health (10.14%)*, *Adverse Childhood Experiences (8.33%)*, with a tie for fifth between *Overweight/Obesity (6.88%)* and *Cancers (6.88%)*.

Health Concern	Highest (1)	2	3	4	Lowest (5)
Mental Health Conditions	63	43	37	15	12
Substance Abuse/Alcoholism/Opioid Use	32	37	28	33	13
Child/Adolescent Emotional Health	28	28	18	20	17
Adverse Childhood Experiences	23	16	13	15	14
Overweight or Obesity	19	19	19	19	10
Cancers	19	12	8	8	6
Senior Health	16	7	16	7	9
Heart Disease	12	11	9	7	7
Maternal Health	10	3	4	2	4

† Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

Diabetes	9	15	14	8	7

Stroke	0	0	0	3	3
HIV/AIDS	0	0	0	2	1
Hepatitis C	0	0	0	1	0
Arthritis	0	0	0	0	1

Overall, the majority of health concerns identified at the individual county level aligned with the top five health concerns identified for the ARHN region. Several counties recognized health concerns outside the top five for the ARHN region. Five out of the seven ARHN counties listed *Cancers* as a top health concern in their county.

Franklin and Hamilton County respondents identified *Diabetes* as a concern in their area, while Fulton County identified Maternal Health, and Hamilton County identified Senior Health. Outliers include Franklin County listing *Heart Disease* as a top concern in their county.

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

Top Five Health Concerns Identified by County					
County	1 st	2 nd	3 rd	4 th	5 th
Clinton	Mental Health Conditions	Substance Use/Alcoholism/Opioid Use	Cancers	Adverse Childhood Experiences	Overweight or Obesity
Essex	Mental Health Conditions	Substance Use/Alcoholism/Opioid Use	Child/Adolescent Emotional Health	Adverse Childhood Experiences	Overweight or Obesity
Franklin	Mental Health Conditions	Substance Use/Alcoholism/Opioid Use	Diabetes	Heart Disease	Overweight or Obesity
Fulton	Mental Health Conditions	Substance Use/Alcoholism/Opioid Use	Cancers	Child/Adolescent Emotional Health	Maternal Health
Hamilton	Mental Health Conditions	Substance Use/Alcoholism/Opioid Use	Cancers	Diabetes	Senior Health
Warren	Mental Health Conditions	Substance Use/Alcoholism/Opioid Use	Child/Adolescent Emotional Health	Adverse Childhood Experiences	Cancers
Washington	Mental Health Conditions	Substance Use/Alcoholism/Opioid Use	Child/Adolescent Emotional Health	Adverse Childhood Experiences	Cancers

Q8. What are the top five contributing factors to the health concerns you identified in Question 7?

Respondents were asked to identify the top five contributing factors to the areas of health concerns they chose. The contributing factors were ranked from one to five, with one being the highest contributing factor and five being the lowest.

The top five contributing factors identified by survey respondents were *Lack of Mental Health Services (13.28%), Addiction to Alcohol/Illicit Drugs (13.28%), Poverty (11.07%), Age of Residents (8.49%), and Changing Family Structures (5.90%)*.

Contributing Factors	Highest (1)	2	3	4	Lowest (5)
Addiction to Alcohol/Illicit Drugs	36	17	18	9	10
Addiction to Nicotine	6	9	7	7	6
Age of Residents	23	9	3	6	8

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

Changing Family Structures (Increased Foster Care, Grandparents as Parents, etc.)	16	24	9	10	9
Crime/Violence	1	2	2	3	4
Community Blight/Deteriorating Infrastructure (Roads, Bridges, Water Systems, etc.)	0	1	1	1	0
Discrimination/Racism	0	2	1	3	0

Poor Community Engagement and Connectivity	4	2	4	5	10

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

Poor Eating/Dietary Practices	11	9	12	5	7
Poor Referrals to Health Care, Specialty Care, and Community-Based Support Services	4	3	4	5	4
Poverty	30	12	14	19	20
Problems with Internet Access (Absent, Unreliable, Unaffordable)	0	0	0	0	1
Religious or Spiritual Values	0	0	1	1	1
Shortage of Child Care Options	2	2	2	4	8
Stress (Work, Family, School, etc.)	6	16	12	15	15
Transportation Problems (Unreliable, Unaffordable)	4	8	9	13	15
Unemployment/Low Wages	6	0	5	2	19

The majority of ARHN counties identified contributing factors that closely aligned with the overall top five for the region. However, several counties also highlighted unique concerns specific to their populations. Clinton County identified food insecurity as a significant contributing factor, while Franklin County emphasized poor eating and dietary practices. Warren County respondents pointed to both transportation and health care costs as key issues. Additionally, Fulton, Hamilton, and Warren counties all included health care costs among their top five contributing factors. Notably, in Warren County, health care costs and homelessness were tied as the fifth most significant contributing factor. These variations underscore the importance of addressing both regional and county-level priorities when planning public health strategies.

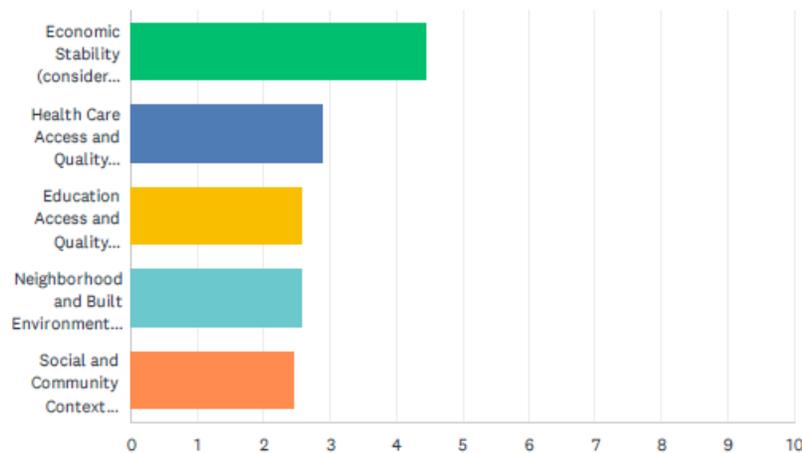

Top Five Contributing Factors by County					
County	1 st	2 nd	3 rd	4 th	5 th
Clinton	Poverty	Addiction to alcohol/illicit drugs	Lack of Mental Health Services	Age of Residents	Food Insecurity
Essex	Poverty	Lack of Mental Health Services	Addiction to alcohol/illicit drugs	Changing Family Structures	Age of Residents
Franklin	Addiction to alcohol/illicit drugs	Lack of Mental Health Services	Poor eating/dietary practices	Age of Residents	Poverty
Fulton	Lack of Mental Health Services	Poverty	Addiction to alcohol/illicit drugs	Changing Family Structures	Health Care Costs
Hamilton	Age of Residents	Lack of Mental Health Services	Poverty	Addiction to alcohol/illicit drugs	Health Care Costs
Warren	Poverty	Lack of Mental Health Services	Addiction to alcohol/illicit drugs	Transportation problems	Health Care Costs & Homelessness
Washington	Poverty	Lack of Mental Health Services	Addiction to alcohol/illicit drugs	Changing Family Structures	Age of Residents

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

Q9. Social Determinants of Health are conditions in the places where people live, learn, work, and play that affect a wide range of health risks and outcomes. Please rate the following Social Determinants of Health impacting the residents of the counties that your organization/agency serves using a scale of (1) "most impact" to (5) "least impact".

Respondents were asked to rank SDOH, listed below, on a scale from one (excellent) to five (very poor). The table below presents the response counts for each determinant across all survey participants.

Sixty-six percent of respondents identified *Economic Stability* as the SDOH that most impacts residents of the counties they serve, followed by *Health Care Access and Quality* (14.79%).

SDOH Domain	1 Most Impact	2	3	4	5 Least Impact	Score
Economic Stability	170 (66.15%)	56 (21.79%)	16 (6.23%)	10 (3.89%)	5 (1.95%)	4.46
Health Care Access and Quality	38 (14.79%)	64 (24.90%)	51 (19.84%)	41 (15.95%)	63 (24.51%)	2.89
Education Access and Quality	25 (9.73%)	46 (17.90%)	50 (19.46%)	71 (27.63%)	65 (25.29%)	2.59
Neighborhood and Built Environment	15 (5.84%)	50 (19.46%)	65 (25.29%)	66 (25.68%)	61 (23.74%)	2.58
Social and Community Context	9 (3.50%)	41 (15.95%)	75 (29.18%)	69 (26.85%)	63 (24.51%)	2.47

† Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

Q10. What population in the counties your organization/agency serves experiences the poorest health outcomes?

To help identify the population with the greatest need, respondents were asked to indicate which group, in their opinion, experiences the poorest health outcomes in the counties they serve.

Population	Count	Percentage
Children/Adolescents	17	6.32%
Females of Reproductive Age	2	0.74%
Individuals living at or near the federal poverty level	88	32.71%
Individuals living in rural areas	26	9.67%
Individuals with Disability	11	4.09%
Individuals with Mental Health issues	58	21.56%
Individuals with Substance Abuse Issues	26	9.67%
Migrant Workers	1	0.37%
Other (please specify)	2	0.74%
Seniors/Elderly	37	13.75%
Specific racial and ethnic groups	1	0.37%

Across all counties in the ARHN, *Individuals living at or near the federal poverty level* (66.21%) were identified as the population experiencing the poorest health outcomes. In six of the seven ARHN counties, excluding Franklin County, the second most commonly identified population was *Individuals with mental health issues* (39.72%). In contrast, Franklin County respondents identified *Seniors or Elderly* (4.11%) as the population with the second poorest health outcomes.

Response Counts for Poorest Health Outcomes by County							
Population	Clinton	Essex	Franklin	Fulton	Hamilton	Warren	Washington
Children/Adolescents	2	7	3	1	1	2	5
Females of reproductive age	1	0	0	1	0	0	0
Individuals living at or near the federal poverty level	20	32	22	15	12	17	27
Individuals living in rural areas	10	10	7	3	4	8	10
Individuals with disability	5	6	3	0	3	6	4
Individuals with mental health issues	12	19	7	13	9	14	13
Individuals with substance abuse issues	9	10	9	5	6	4	6

Specific racial or ethnic groups	0	1	0	0	1	1	1
Other (please specify)	1	1	1	2	1	2	1
Total per county	76	116	69	52	46	64	89

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

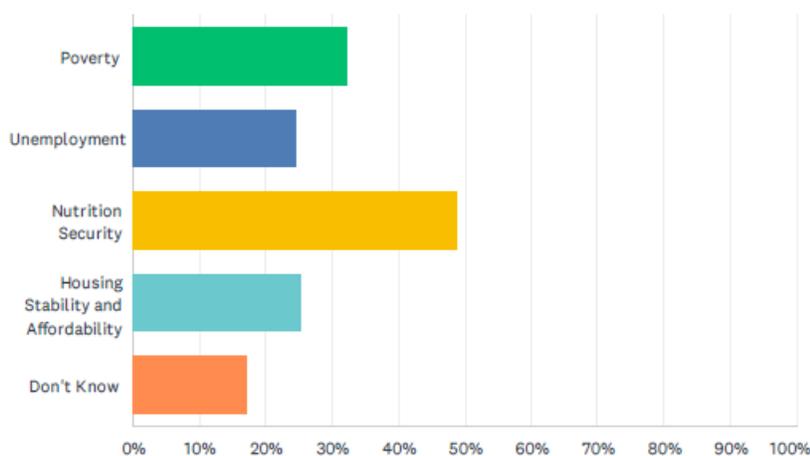

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

2025 New York State Prevention Agenda:

The NYS Prevention Agenda is an initiative focused on improving the health and well-being of all New Yorkers. The 2025-2030 Prevention Agenda outlines 24 key priorities to address health conditions, behaviors, and systemic issues such as poverty, education, housing, and access to quality healthcare. Addressing these issues is crucial for reducing health disparities.

The next five questions of the survey asked respondents to select the top three goals their organization or agency can assist in achieving in the counties it serves.

Q11. Economic Stability (Economic Well-Being)

Domain: Economic Stability		
Priority Area	Count	Percentage
Poverty	74	32.31%
Unemployment	56	24.45%
Nutrition Security	112	48.91%
Housing Stability and Affordability	58	25.33%
Don't Know	39	17.03%

Respondents identified *Nutrition Security* (48.91%), *Poverty* (32.31%), and *Housing Stability and Affordability* (25.33%) as the top three priority areas that their organization are best positioned to support achieving in the region. Six out of seven ARHN counties identified *Nutrition Security* as the top priority, with the exception of Franklin County which identified *Poverty*.

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

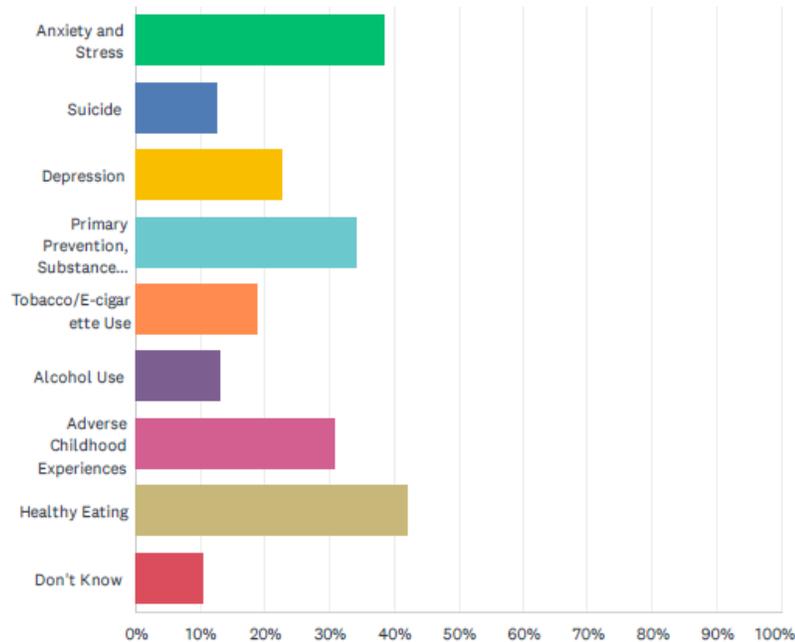

Domain: Economic Stability			
County/Region	Priority #1	Priority #2	Priority #3
Clinton	Nutrition Security	Poverty	Tied: Unemployment & Housing Stability and Affordability
Essex	Nutrition Security	Poverty	Tied: Unemployment & Housing Stability and Affordability
Franklin	Poverty	Nutrition Security	Unemployment
Fulton	Nutrition Security	Poverty	Tied: Unemployment & Housing Stability and Affordability
Hamilton	Nutrition Security	Poverty	Tied: Unemployment & Housing Stability and Affordability
Warren	Nutrition Security	Housing Stability and Affordability	Poverty
Washington	Nutrition Security	Tied: Poverty and Housing Stability and Affordability	Unemployment

Domain: Economic Stability							
Priority Area	Clinton	Essex	Franklin	Fulton	Hamilton	Warren	Washington
Poverty	23	26	24	13	9	14	18
Housing Stability and Affordability	17	21	14	9	7	15	18
Nutrition Security	31	38	20	20	13	21	31
Unemployment	16	21	17	8	7	12	14
Don't Know	8	12	5	10	8	9	10

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

Q12. Social and Community Context (Mental Well-Being and Substance Use)

Respondents identified *Healthy Eating* (42.26%) as the top priority area that their organization could assist with achieving, followed by *Anxiety and Stress* (38.49%) and *Primary Prevention, Substance Misuse, and Overdose prevention* (34.31%) as the third highest priority areas.

Domain: Social and Community Context		
Priority Area	Count	Percentage
Adverse Childhood Experiences	74	30.96%
Alcohol Use	31	12.97%
Anxiety and Stress	92	38.49%
Depression	54	22.59%
Healthy Eating	101	42.26%
Primary Prevention, Substance Misuse, and Overdose Prevention	82	34.31%
Suicide	30	12.55%
Tobacco/E-cigarette Use	45	18.83%
Don't Know	25	10.46%

All seven counties identified the same top three regional priorities, apart from Franklin County, which included Depression among its top three. Additionally, four of the seven counties identified *Adverse Childhood Experiences* in their top three priority areas.

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

Don't Know	7	3	6	9	8	6	10

Q16. Please identify the primary assets/resources your organization/agency can contribute toward achieving the goals you have selected.

Respondents were asked to indicate the resources that their organization or agency could contribute toward achieving the goals they identified.

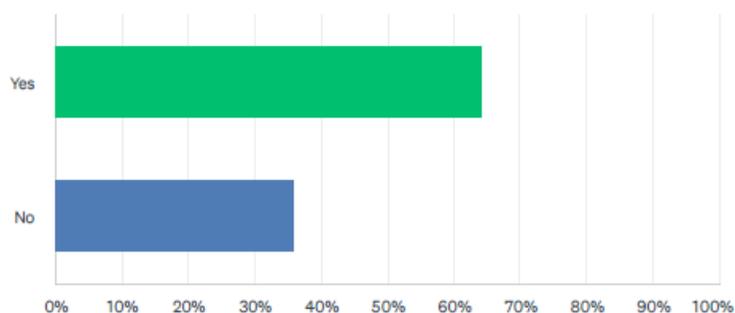

Approximately 59% of all respondents indicated that providing expertise and knowledge, as well as participating in committees, workgroups, and coalitions were key ways they could support progress towards the NYS Prevention Agenda goals listed above. Additionally, respondents noted that they could contribute sharing resources and promoting initiatives via social media to help advance the listed goals.

Response Counts and Percentages for Resources Organizations Can Contribute		
Resources	Count	Percentage
Participate on committees, work groups, and coalitions to help achieve the selected goals	124	59.33%
Provide subject-matter knowledge and expertise	121	57.89%
Share knowledge of community resources (e.g. food, clothing, housing, transportation, etc.)	104	49.76%
Promote health improvement activities/events through social media and other communication channels your organization/agency operates	99	47.37%
Offer health-related educational materials	71	33.97%
Facilitate access to populations your organization/agency serves (to encourage participation in programs, provide feedback about health improvement efforts, etc.)	66	31.58%
Facilitate access to committees, work groups, coalitions currently working to achieve the selected goals	61	29.19%
Provide letters of support for planned health improvement activities	61	29.19%
Sign partnership agreements related to community level health improvement efforts	48	22.97%
Offer periodic organizational/program updates to community stakeholders	46	22.01%
Provide in-kind space for health improvement meetings/events	45	21.53%
Provide knowledge of and/or access to potential sources of funding (grants, philanthropy)	37	17.7%
Share program-level data to help track progress in achieving goals	36	17.22%
Assist with data analysis	24	11.48%

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

Q17. Are you interested in being contacted at a later date?

Over 64% of respondents indicated they would be open to being contacted at a later date. Depending on the content and priorities outlined in the official 2025-2030 NYS Prevention Agenda official release, it may be beneficial to follow-up with partners to gather more targeted input or ask specific questions aligned with the finalized goals.

Appendix: The 2025 Stakeholder Survey

2025 CHA Stakeholders Survey

Introduction

To help inform a collaborative approach to improving community health, the Adirondack Rural Health Network (ARHN) and Community Health Assessment (CHA) Committee seeks to identify priorities, factors and resources that influence the health of residents of the Adirondack region (Clinton, Essex, Franklin, Fulton, Hamilton, Warren, and Washington counties).

You have been identified as a key informant who can provide insight into the health and well-being of the people your organization/agency serves. Please answer the survey questions in the context of your role within your organization/agency and in representing the population(s) your organization/agency serves.

All survey information will be held confidential, and no responses will be attributed to anyone individual or agency.

Your Organization/Agency

Please provide the following information about your organization/agency and yourself:

1. Organization/Agency name: _____

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

2. Your name (Please provide first and last name): _____

3. Your job title/role: _____

- Community Member
- Direct Service Staff
- Program/Project Manager
- Administrator/Director
- Other (please specify)

4. Your email address: _____

5. Indicate the **one** community sector that best describes your organization/agency:

- Business
- Civic Association
- College/University
- Disability Services
- Early Childhood
- Economic Development
- Employment/Job training
- Faith-Based
- Food/Nutrition
- Foundation/Philanthropy
- Health Based CBO
- Health Care Provider
- Health Insurance Plan
- Housing
- Law Enforcement/Corrections
- Local Government (e.g., elected official, zoning/planning board)
- Media
- Mental, Emotional, Behavioral Health Provider
- Public Health
- Recreation
- School (K – 12)
- Seniors/Aging Services
- Social Services
- Transportation
- Tribal Government

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

- Veterans
- Other (please specify):

6. Indicate the counties your organization/agency serves. **Check all that apply.**

- Adirondack/North Country Region
- Clinton
- Essex
- Franklin
- Fulton
- Hamilton
- Warren
- Washington
- Other: _____

Health Priorities, Concerns and Factors

7. In your opinion, what are the **top five (5) health concerns** affecting the residents of the counties your organization/agency serves? Please rank the health concerns from 1 (highest) to 5 (lowest).

- Adverse childhood experiences
- Alzheimer's disease/Dementia
- Arthritis
- Autism
- Cancers
- Child/Adolescent physical health
- Child/Adolescent emotional health
- Diabetes
- Disability
- Dental health
- Domestic abuse/violence
- Exposure to air and water pollutants/hazardous materials
- Falls
- Food safety

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

- Heart disease
- Hepatitis C
- High blood pressure
- HIV/AIDS
- Hunger
- Infant health
- Infectious disease
- LGBT health
- Maternal health
- Mental health conditions
- Motor vehicle safety (impaired/distracted driving)
- Overweight or obesity
- Pedestrian/bicyclist accidents
- Prescription drug abuse
- Respiratory disease (asthma, COPD, etc.)
- Senior health
- Sexual assault/rape
- Sexually transmitted infections
- Social connectedness
- Stroke
- Substance abuse/Alcoholism/Opioid Use
- Suicide
- Tobacco use/nicotine addiction – smoking/vaping/chewing
- Underage drinking
- Unintended/Teen pregnancy
- Violence (assault, firearm related)
- Other (Please specify):

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

8. In your opinion, what are the **top five (5) contributing factors** to the health concerns you chose in question #7? Please rank the contributing factors from 1 (highest) to 5 (lowest).

- Addiction to alcohol/illicit drugs
- Addiction to nicotine
- Age of residents
- Changing family structures (increased foster care, grandparents as parents, etc.)
- Crime/violence
- Community blight/Deteriorating infrastructure (roads, bridges, water systems, etc.)
- Discrimination/racism
- Domestic violence and abuse
- Environmental quality
- Excessive screen time
- Exposure to tobacco smoke/emissions from electronic vapor products
- Food insecurity
- Health care costs
- Homelessness
- Inadequate physical activity
- Inadequate sleep
- Inadequate/unaffordable housing options
- Lack of chronic disease screening, treatment, and self-management services
- Lack of cultural and enrichment programs
- Lack of dental/oral health care services
- Lack of quality educational opportunities for people of all ages
- Lack of educational, vocational, or job-training options for adults
- Lack of employment options
- Lack of health education programs
- Lack of health insurance
- Lack of intergenerational connections within communities
- Lack of mental health services
- Lack of opportunities for health for people with physical limitations or disabilities
- Lack of preventive/primary health care services (screenings, annual check-ups)
- Lack of social support for community residents
- Lack of specialty care and treatment
- Lack of substance use disorder services.

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

- Late or no prenatal care
- Pedestrian safety (roads, sidewalks, buildings, etc.)
- Poor access to healthy food and beverage options
- Poor access to public places for physical activity and recreation
- Poor community engagement and connectivity
- Poor eating/dietary practices
- Poor referrals to health care, specialty care, and community-based support services
- Poverty
- Problems with Internet access (absent, unreliable, unaffordable)
- Religious or spiritual values
- Shortage of childcare options
- Stress (work, family, school, etc.)
- Transportation problems (unreliable, unaffordable)
- Unemployment/low wages
- Other (please specify)

Prevention Agenda 2025 -2030: New York State’s Health Improvement Plan

The NYS Prevention Agenda is a six-year initiative aimed at improving the health and well-being of all New Yorkers. By outlining the key health priority areas, the prevention agenda is a tool for agencies to collaborate and prioritize strategies that advance health.

Although not officially released, NYS DOH recognizes that the 2025-2030 Prevention Agenda will “adopt a broader perspective, emphasizing factors that influence health beyond traditional health outcomes, prevention strategies, medical care, and public health systems”.

Twenty-four priorities have been identified based on Healthy People’s 2030 Social Determinants of Health domains, listed below:

1. Economic Stability
2. Social and Community Context
3. Neighborhood and Built Environment
4. Health Care Access and Quality
5. Education Access and Quality

For more information on the upcoming 2025-2030 NYS Prevention Agenda, please visit: [Prevention Agenda 2025-2030: New York State's Health Improvement Plan](#).

For more information on Healthy People’s 2030 Social Determinants of Health, please visit: [Social Determinants of Health - Healthy People 2030 | odphp.health.gov](#).

Social Determinants of Health

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

9. Social Determinants of Health are conditions in the places where people live, learn, work, and play that affect a wide range of health risks and outcomes. Please rate the following Social Determinants of Health impacting the residents of the counties that your organization/agency serves using a scale of (1) "most impact" to (5) "least impact".

- Economic Stability (consider poverty, employment, food security, housing stability)
- Education Access and Quality (consider high school graduation, enrollment in higher education, language and literacy, early childhood education and development)
- Social and Community Context (consider social cohesion, civic participation, perceptions of discrimination and equity, incarceration/institutionalization)
- Neighborhood and Built Environment (consider access to healthy foods and beverages, quality of housing, crime and violence, environmental conditions, transportation)
- Health Care Access and Quality (consider access to primary care, access to specialty care, health literacy)

10. In your opinion, what **population** in the counties your organization/agency serves experiences the poorest health outcomes? Please select **one** population.

- Specific racial or ethnic groups
- Children/adolescents
- Females of reproductive age
- Seniors/elderly
- Individuals with disability
- Individuals living at or near the federal poverty level
- Individuals with mental health issues
- Individuals living in rural areas
- Individuals with substance abuse issues
- Migrant workers
- Others (please specify):

Improving Health and Well-Being

The NYS Prevention Agenda is an initiative focused on improving the health and well-being of all New Yorkers. The 2025-2030 Prevention Agenda outlines 24 key priorities to address health conditions, behaviors, and systemic issues such as poverty, education, housing, and access to quality healthcare. Addressing these issues is crucial for reducing health disparities.

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

Over the next 5 questions, please check all the priority areas that your organization serves.

11. Economic Stability (Economic Well-being)

- Poverty
- Unemployment
- Nutrition Security
- Housing Stability and Affordability

12. Social and Community Context (Mental Well-being and Substance Use)

- Anxiety and Stress
- Suicide
- Depression
- Primary Prevention, Substance Misuse, and Overdose Prevention
- Tobacco/E-cigarette Use
- Alcohol Use
- Adverse Childhood Experiences
- Healthy Eating

13. Neighborhood and Built Environment (Safe and Healthy Communities)

- Opportunities for Active Transportation and Physical Activity
- Access to Community Services and Support
- Injuries and Violence

14. Health Care Access and Quality (Health Insurance Coverage and Access to Care and Healthy Children)

- Access to and Use of Prenatal Care
- Prevention of Infant and Maternal Mortality
- Preventive Services for Chronic Disease Prevention and Control
- Oral Health Care
- Preventive Services (Immunization, Hearing Screening and follow up, Lead screening)
- Early Intervention
- Childhood Behavioral Health

15. Education Access and Quality (PreK-12 Student Success and Educational Attainment)

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

- Health and Wellness Promoting Schools
- Opportunities for Continued Education

16. Based on the priorities you selected in Questions 12-16, please identify the primary assets/resources your organization/agency can contribute toward achieving the goals you have selected.

- Provide subject-matter knowledge and expertise
- Provide knowledge of and/or access to potential sources of funding (grants, philanthropy)
- Facilitate access to committees, work groups, coalitions currently working to achieve the selected goals
- Participate on committees, work groups, coalitions to help achieve the selected goals
- Share knowledge of community resources (e.g. food, clothing, housing, transportation, etc.)
- Facilitate access to populations your organization/agency serves (to encourage participation in programs, provide feedback about health improvement efforts, etc.)
- Promote health improvement activities/events through social media and other communication channels your organization/agency operates
- Share program-level data to help track progress in achieving goals
- Provide in-kind space for health improvement meetings/events
- Offer periodic organizational/program updates to community stakeholders
- Provide letters of support for planned health improvement activities
- Sign partnership agreements related to community level health improvement efforts
- Assist with data analysis
- Offer health-related educational materials
- Other (please specify):

17. Are you interested in being contacted at a later date to discuss the utilization of the resources you identified in Question #16?

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

- Yes
- No

18. Please add any other comments/recommendations you have about improving the health and well-being of the residents of the counties your organization/agency serves.

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

Appendix D – County Health Rankings & Roadmaps

[†] Margin of error is at least 10 percent of the total value. Take care with this statistic.

*Upstate New York is defined as all counties in New York State excluding those that comprise New York City: Bronx, Kings, New York, Queens, and Richmond counties. - All rates are per 100,000 unless otherwise specified.

COUNTY
Warren, NY

2025

County Demographics

The health of a place results from past and present policies and practices. The land known as Warren County, along with the entirety of the U.S., has been home for many thousands of years to hundreds of Indigenous nations. Native Land Digital "strives to create and foster conversations about the history of colonialism, Indigenous ways of knowing, and settler-Indigenous relations."

Warren County, New York is Metropolitan. In Warren County, 32.2% of the population lives in a low population density area.

County Snapshot

This county's snapshot covers: Population Health and Well-being, Community Conditions

The skittles diagram, Areas to Explore, and Areas of Strength are based on our annual data update. However, individual measures may reflect more recent data releases to ensure the most accurate and up-to-date statistics available.

Warren County Population Health and Well-being

Population health and well-being is something we create as a society, not something an individual can attain in a clinic or be responsible for alone. Health is more than being free from disease and pain; health is the ability to thrive. Well-being covers both quality of life and the ability of people and communities to contribute to the world. Population health involves optimal physical, mental, spiritual and social well-being.

Warren County is faring about the same as the average county in New York for Population Health and Well-being, and better than the average county in the nation.

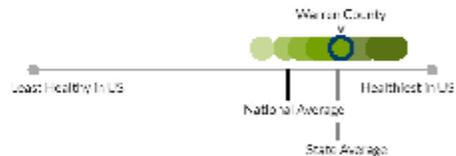

Diagram summarizes data released on 03/19/2025
