Weight Gain and Heart Health

odest weight gains can cause dangerous changes to the heart, but small amounts of weight loss can improve the heart's condition, say researchers at UT Southwestern Medical Center. The study found that increasing your weight by as little as 5 percent can result in a remodeling of the heart. That's the equivalent of a 6.5-pound gain for a 130-pound woman or about a 7.5-pound gain for a 150-pound man. Caution: Although it is important to understand the impact of weight gain on the heart, attempting to lose weight in unhealthy ways can have an even worse effect. For example, eating disorders are a known cause of heart valve damage.

Work Addiction Scale

orkaholism is not an officially recognized disease process, but those who work too much are more prone to depression and anxiety disorders, and these are real treatable illnesses. Examining your work pattern can moti-

vate you to find more balance. You can then discover whether the changes you want are too difficult to maintain. This can help you decide the next step-seeking counseling or support from an EAP or counseling resource. Start with a screening tool called the Bergen Work Addiction Scale. Published research from the U.S. National Institutes of Health shows the online measurement tool as reliable for its purpose.

Detachment: The Decision to Let Go

re you facing the loss of a close rela-

tionship, deciding it's now time to let go and end the pain and conflict associated with it? You may want to consider counseling support for this journey. The challenge of ending an unhealthy or toxic relationship often includes a cycle of holding on, letting go, retrieval, and the hope of one last try, followed by an even bigger letdown. You may face grief-like reactions such as denial, anger, and depression before acceptance. Counseling can help you weather this storm, help keep you grounded, and challenge you to find the healthier path you really want.

What Willingness to Learn Says about You

ou may have hard-fought education and training in one area of work, but if you are not communicating a strong sense of willingness to learn new skills, you may be overlooking opportunities and a critical way to engage with your employer in the modern era. Willingness and a desire to learn demonstrate your motivation for personal improvement

and achievement. Your willingness and desire to learn a soft skill employers value says a lot about you. Employers look for potential, capability, and the ability to withstand change. Desire for a new challenge communicates it all.

AUGUST 2017—EAP REACHING OUT

Parenting Against Fake IDs

esearch shows between 12 percent and 32 percent of college freshmen and sophomores own fake IDs. Those with Greek membership have the highest use of fake IDs. A direct correlation exists between young adults with fake IDs and the likelihood of binge

drinking and getting arrested. If you are a parent offering guidance to your student heading off to college, these tips on a firm discussion centered on disapproval may be helpful: 1) Read the sourced information below. Links to similar studies are also there. Equip yourself with facts about the hazardous practice of purchasing a fake ID. 2) Understand the laws in the state, the rules, and the penalties on the college campus where your student is attending. 3) Do not think that your parental insistence against purchasing a fake ID will fall on deaf ears. Research shows that teens listen to parents more than the parents realize, and they follow parental demands far more than expected, despite how it may appear. 4) Follow the money. If you're helping with expenses, you have the right to know where the money has gone. 5) Don't be afraid to keep tabs on your child. Over time, troubled kids will find other friends who don't have so much parental involvement. 6) Don't turn a blind eye to underage drinking. Under age 21, it is an illegal activity.

Best Back-to-School

TIDS

etting kids back to school and on a new schedule can be a

tug of war without a little preparation. Here are four tips that stand the test of time: 1) For the nervous voungster facing a new school or grade, walk through the schedule one week before school begins, visit classrooms, and get a lay of the land to reduce anxiety. 2) If the school offers a pre-start, back-to-school night, attend it. 3) Beginning a week before the start of school, test sleeping routines by having everyone in the family practice going to bed and getting up at the expected hour. 4) Create a chart or to-do list of both the morning and the evening routines so young ones grasp the importance of self-management and independence.

Tips for Better Mental Hygiene
